

## Offre n°2024-07381

# PhD Position F/M Developing a deep learning framework to design cyclic peptides

Type de contrat : Fixed-term contract

Niveau de diplôme exigé : Graduate degree or equivalent

Fonction : PhD Position

### Contexte et atouts du poste

The main goal of this PhD project is to develop a deep learning framework for the design of cyclic peptides. This project has an important impact on designing therapeutics to fight emerging diseases. Moreover, we will take advantage of the recent advances of deep learning methods, investigate several algorithms, and ultimately provide an open source application to the broad scientific community. This approach is a prerequisite for the design of new therapeutic peptides that target macromolecular complexes.

The PhD candidate will be hosted in the CAPSID team within LORIA at the Inria, Nancy - Grand Est site. The candidate will be supervised by Yasaman Karami (Inria researcher) with expertise in analyzing proteins conformational dynamics and peptide design [1] and Hamed Khakzad (CPJ Inria) expert in artificial intelligence and protein design [2]. CAPSID team (<https://capsid.loria.fr/>) is directed by Dr. Marie-Dominique Devignes and provides a multidisciplinary and international environment for students. The team benefits from experts in computational biology and structural bioinformatics, as well as in computer science. The group is equipped with a computational platform, MBI-DS4H (<https://mbi-ds4h.loria.fr/>) composed of 8 nodes and 12 GPUs, and provides technical support to the users.

### Mission confiée

Proteins often interact closely with other proteins to form a protein-protein interaction (PPI) network. Finely orchestrated PPIs are at the heart of virtually all fundamental cellular processes [1]. A large number of PPIs contribute to life-threatening diseases [2], and more than half a million PPI dysregulations have been found to be involved in pathological events [3]. Targeting PPIs is one of the main therapeutic strategies to fight against several diseases, and numerous experimental and computational approaches were developed in this direction. The advantages of peptides (that are protein fragments) such as small surface area, weak target affinity and low specificity [4], resulted in a shift of the recent developments toward considering peptides for targeting PPIs. One recent example is the Spike of SARS-CoV-2 that binds to the human ACE2 receptor, for which the use of peptides to inhibit the PPI formed between RBD and ACE2 is a very active field of research [5]. Moreover, the recent advances of machine learning and deep learning in the CASP competition and the outbreak of AlphaFold2 [6] for the prediction of protein structures have shown that, they can improve discovery and decision making when high-quality data are available. The main goal of this project is to design head-to-tail cyclic peptides for targeting defined sites in proteins of interest. To achieve this objective, we propose the development of a deep learning architecture. Within the aims of the project, we will investigate several facets of the algorithms and the design processes, and ultimately provide this application to the broad scientific community. The main goal of the PhD project is to develop a deep generative model to design cyclic peptide sequences toward specific target. To do so, the student requires to have extensive background in deep learning and computational biology.

## Principales activités

- Literature review of the relevant studies
- Preparing a test set using existing databases of peptides and proteins
- Developing a generative model to design peptides
- Implementing the method and preparing a software using Python
- Validating the method and analysing the results
- Writing dissertation, scientific articles and presenting the work in international conferences

## Compétences

- Master's degree in Computer Science, Bioinformatics, Chemoinformatics or a related master program
- Proficiency in programming languages (Python, PyTorch or R) and good coding practices
- Skills in algorithm design and computational biology
- Experience in deep learning
- Ability to work independently and also to work in a team
- Excellent oral and written English skills

## Avantages

- Subsidized meals
- Partial reimbursement of public transport costs
- Leave: 7 weeks of annual leave + 10 extra days off due to RTT (statutory reduction in working hours) + possibility of exceptional leave (sick children, moving home, etc.)
- Possibility of teleworking (after 6 months of employment) and flexible organization of working hours
- Professional equipment available (videoconferencing, loan of computer equipment, etc.)
- Social, cultural and sports events and activities
- Access to vocational training
- Social security coverage

## Rémunération

2100€ gross/month the 1st year

## Informations générales

- **Thème/Domaine :** Computational Biology  
Biologie et santé, Sciences de la vie et de la terre (BAP A)
- **Ville :** Villers-lès-Nancy
- **Centre Inria :** [Centre Inria de l'Université de Lorraine](#)
- **Date de prise de fonction souhaitée :** 2024-10-01
- **Durée de contrat :** 3 years
- **Date limite pour postuler :** 2024-04-29

## Contacts

- **Équipe Inria :** [CAPSID](#)
- **Directeur de thèse :**  
Karami Yasaman / [yasaman.karami@inria.fr](mailto:yasaman.karami@inria.fr)

## A propos d'Inria

Inria est l'institut national de recherche dédié aux sciences et technologies du numérique. Il emploie 2600 personnes. Ses 215 équipes-projets agiles, en général communes avec des partenaires académiques, impliquent plus de 3900 scientifiques pour relever les défis du numérique, souvent à l'interface d'autres disciplines. L'institut fait appel à de nombreux talents dans plus d'une quarantaine de métiers différents. 900 personnels d'appui à la recherche et à l'innovation contribuent à faire émerger et grandir des projets scientifiques ou entrepreneuriaux qui impactent le monde. Inria travaille avec de nombreuses entreprises et a accompagné la création de plus de 200 start-up. L'institut s'efforce ainsi de répondre aux enjeux de la transformation numérique de la science, de la société et de l'économie.

**Attention:** Les candidatures doivent être déposées en ligne sur le site Inria. Le traitement des candidatures adressées par d'autres canaux n'est pas garanti.

## Consignes pour postuler

### Sécurité défense :

Ce poste est susceptible d'être affecté dans une zone à régime restrictif (ZRR), telle que définie dans le décret n°2011-1425 relatif à la protection du potentiel scientifique et technique de la nation (PPST). L'autorisation d'accès à une zone est délivrée par le chef d'établissement, après avis ministériel favorable, tel que défini dans l'arrêté du 03 juillet 2012, relatif à la PPST. Un avis ministériel défavorable pour un poste affecté dans une ZRR aurait pour conséquence l'annulation du recrutement.

**Politique de recrutement :**

Dans le cadre de sa politique diversité, tous les postes Inria sont accessibles aux personnes en situation de handicap.
