

Offre n°2024-07504

PhD Position F/M Speech synthesis for Alsatian and the languages of France

Type de contrat : Fixed-term contract

Niveau de diplôme exigé : Graduate degree or equivalent

Fonction : PhD Position

Contexte et atouts du poste

This PhD is part of the Inria COLaF Challenge "Corpora and Tools for the Languages of France", which aims to create open, inclusive corpora, models and software for the languages of France. These include regional languages (Alsatian, Breton, Corsican, Occitan, Picard, etc.), overseas languages (Creoles, Polynesian, Kanak, Mahorese languages, etc.), and non-territorial immigrant languages (dialectal Arabic, Western Armenian, Berber, Judeo-Spanish, Romani, Yiddish).

The PhD student will be co-supervised by [Vincent Colotte](#), [Pascale Erhart](#), and [Emmanuel Vincent](#). They will benefit from the expertise of the [Multispeech](#) team in speech processing and that of [LiLPa](#) in dialectology, corpus phonetics and NLP. They will collaborate with the engineers responsible for the creation and distribution of corpora and software building blocks and with other project partners.

Mission confiée

Linguistic technologies are key for the protection, promotion and teaching of regional and overseas languages and for the inclusion of speakers of non-territorial immigrant languages. However, these languages remain largely ignored by language technology providers [1]. This is particularly true of text-to-speech (TTS) systems, which are typically trained on high-quality datasets recorded in the studio by a few professional actors. This method induces a high cost for each language and limits the number of voices and their expressiveness.

The objective of the PhD is to design a general approach to the development of multi-speaker TTS systems for these under-resourced languages based on existing sound archives (radio, television, web, etc.). This is a radically different approach from the state of the art, which poses two difficulties: these archives are of variable quality and mostly untranscribed. To address these difficulties, we will rely on the possibility of learning a high-quality TTS system from a variable-quality dataset [2] and on the emergence of few-shot speech recognition systems [3] allowing automatic transcription of data.

The developed approach will be validated for Alsatian, which is the second regional language spoken in France in terms of number of speakers while remaining an under-resourced language in terms of data [4]. It will then be extended to one or two other languages of France, depending on the skills and wishes of the candidate. The research work will be based on the datasets collected by the engineers of the COLaF Challenge.

Principales activités

In addition to the small amount of data and potentially the low number of speakers available, i) not all regional languages are written or admit a standard writing, ii) speech has not always been recorded with sufficient quality for TTS, iii) the text transcript is often unavailable or differs from the spoken words (transcription errors, subtitles, etc.). Work will therefore include i) designing a methodology for choosing and preparing data, which can be based on the automatic estimation of the quality of the signal [2] and its transcription [5], on semi-automatic transcription and correction methods and/or on active learning, ii) designing a multi-speaker TTS method capable of exploiting this data, which can rely on the phonetic and/or morphological proximity between languages targeted and similar well-resourced languages (French, German, etc.) [6], as well as on text-only resources [7], iii) coupling it with style transfer approaches for the expression of emotions [8].

Compétences

MSc degree in speech processing, NLP, machine learning, computational linguistics, or in a related field.
Strong programming skills in Python/Pytorch.
Prior experience with speech processing or NLP is an asset.
Knowledge of a French regional, overseas or non-territorial language is a plus.

Avantages

- Restauration subventionnée
- Transports publics remboursés partiellement
- Congés: 7 semaines de congés annuels + 10 jours de RTT (base temps plein) + possibilité d'autorisations d'absence exceptionnelle (ex : enfants malades, déménagement)
- Possibilité de télétravail (après 6 mois d'ancienneté) et aménagement du temps de travail
- Équipements professionnels à disposition (visioconférence, prêts de matériels informatiques, etc.)
- Prestations sociales, culturelles et sportives (Association de gestion des œuvres sociales d'Inria)
- Accès à la formation professionnelle
- Sécurité sociale

Rémunération

2100 € brut/mois (la 1ère année)

Informations générales

- **Thème/Domaine** : Language, Speech and Audio
- **Ville** : Villers lès Nancy
- **Centre Inria** : [Centre Inria de l'Université de Lorraine](#)
- **Date de prise de fonction souhaitée** : 2024-10-01
- **Durée de contrat** : 3 years
- **Date limite pour postuler** : 2024-05-19

Contacts

- **Équipe Inria** : [MULTISPEECH](#)
- **Directeur de thèse** :
Vincent Emmanuel / emmanuel.vincent@inria.fr

A propos d'Inria

Inria est l'institut national de recherche dédié aux sciences et technologies du numérique. Il emploie 2600 personnes. Ses 215 équipes-projets agiles, en général communes avec des partenaires académiques, impliquent plus de 3900 scientifiques pour relever les défis du numérique, souvent à l'interface d'autres disciplines. L'institut fait appel à de nombreux talents dans plus d'une quarantaine de métiers différents. 900 personnels d'appui à la recherche et à l'innovation contribuent à faire émerger et grandir des projets scientifiques ou entrepreneuriaux qui impactent le monde. Inria travaille avec de nombreuses entreprises et a accompagné la création de plus de 200 start-up. L'institut s'efforce ainsi de répondre aux enjeux de la transformation numérique de la science, de la société et de l'économie.

Attention: Les candidatures doivent être déposées en ligne sur le site Inria. Le traitement des candidatures adressées par d'autres canaux n'est pas garanti.

Consignes pour postuler

Sécurité défense :

Ce poste est susceptible d'être affecté dans une zone à régime restrictif (ZRR), telle que définie dans le décret n°2011-1425 relatif à la protection du potentiel scientifique et technique de la nation (PPST). L'autorisation d'accès à une zone est délivrée par le chef d'établissement, après avis ministériel favorable, tel que défini dans l'arrêté du 03 juillet 2012, relatif à la PPST. Un avis ministériel défavorable pour un poste affecté dans une ZRR aurait pour conséquence l'annulation du recrutement.

Politique de recrutement :

Dans le cadre de sa politique diversité, tous les postes Inria sont accessibles aux personnes en situation

de handicap.
