

Offre n°2024-08486

PhD Position F/M PhD position on Verification of Differential Privacy

Type de contrat : Fixed-term contract

Niveau de diplôme exigé : Graduate degree or equivalent

Fonction : PhD Position

Niveau d'expérience souhaité : Recently graduated

A propos du centre ou de la direction fonctionnelle

The Inria University of Lille centre, created in 2008, employs 360 people including 305 scientists in 15 research teams. Recognised for its strong involvement in the socio-economic development of the Hauts-De-France region, the Inria University of Lille centre pursues a close relationship with large companies and SMEs. By promoting synergies between researchers and industrialists, Inria participates in the transfer of skills and expertise in digital technologies and provides access to the best European and international research for the benefit of innovation and companies, particularly in the region. For more than 10 years, the Inria University of Lille centre has been located at the heart of Lille's university and scientific ecosystem, as well as at the heart of Frenchtech, with a technology showroom based on Avenue de Bretagne in Lille, on the EuraTechnologies site of economic excellence dedicated to information and communication technologies (ICT).

Contexte et atouts du poste

This PhD thesis project is part of the ANR project HOPR (Higher-Order Probabilistic and resource-aware Reasoning) (ANR-24-CE48-5521-01) coordinated by P. Baillot, starting in 2025 and aiming at defining expressive logical frameworks, dealing in particular with higher-order computation and probabilities, which can

serve to reason on cryptographic primitives and protocols and on differential privacy. The project has three partner sites: INRIA Lille/CRISAL; INRIA Paris; IRISA Rennes and INRIA Sophia-Antipolis. It is starting in January 2025 for 4 years.

The recruited PhD student will carry out her/his research in the SyCoMoRES project-team at INRIA Lille / CRISAL, under the supervision of P. Baillot.

Mission confiée

When computing values from sensitive datasets such as e.g. medical records, it is of crucial importance to guarantee some privacy properties. Methods based on anonymization are not sufficient in general because clever combinations with other data sources can lead to some privacy breaches. Differential privacy (DP) [DR14] is a quantitative notion of privacy that provides strong confidentiality guarantees and at the same time is flexible enough to allow for useful computations on private data. Technically it relies on the notion of program sensitivity, which is a bound relating the distance between two outputs of a program to the distance between the two inputs. DP has become a gold standard for data privacy. However, manually checking that large programs are differentially private can be both tedious and subtle. For this reason some formal methods approaches to sensitivity analysis and DP have been developed in the last decade [BGHP16]. Among them one can mention for instance approaches based on Hoare logics [BKOB12, BGG+16] and approaches based on type systems [RP10, GHH+13, NDA+19, TDA+23, jwdABG23, SB24]. The first line of work has been developed for programs in imperative languages while the second one is for programs from functional languages.

In this PhD project we propose to develop a program logic approach for reasoning on the DP of probabilistic higher-order functional programs. The goal is to obtain in this way a general and expressive approach for proving DP properties of such programs, which would allow both to verify the correctness of basic primitives or mechanisms, and to ensure that the composition of high-level functions satisfies the properties. In particular an interest of such a program logic will be to verify that the rules of a typing system for DP are sound.

Principales activités

- Carry out the PhD research project on Verification of Differential Privacy
- Collaborate with other SyCoMoRES team members and with the ANR HOPR project partners
- Disseminate research results, by publications and presentations at international conferences

Compétences

The candidate should be fluent in English.

Some basic knowledge of either type systems, proof theory, proof systems or program verification is expected.

Some knowledge of differential privacy would be appreciated but is not compulsory.

Avantages

- Subsidized meals
- Partial reimbursement of public transport costs
- Leave: 7 weeks of annual leave + 10 extra days off due to RTT (statutory reduction in working hours) + possibility of exceptional leave (sick children, moving home, etc.)
- Possibility of teleworking and flexible organization of working hours
- Professional equipment available (videoconferencing, loan of computer equipment, etc.)
- Social, cultural and sports events and activities
- Access to vocational training
- Social security coverage

Informations générales

- **Thème/Domaine** : Proofs and Verification
- **Ville** : Villeneuve d'Ascq

- **Centre Inria :** [Centre Inria de l'Université de Lille](#)
- **Date de prise de fonction souhaitée :** 2025-09-01
- **Durée de contrat :** 3 years
- **Date limite pour postuler :** 2025-05-14

Contacts

- **Équipe Inria :** [SYCOMORES](#) (DIR-LIL)
- **Directeur de thèse :**
Baillot Patrick / patrick.baillot@inria.fr

A propos d'Inria

Inria est l'institut national de recherche dédié aux sciences et technologies du numérique. Il emploie 2600 personnes. Ses 215 équipes-projets agiles, en général communes avec des partenaires académiques, impliquent plus de 3900 scientifiques pour relever les défis du numérique, souvent à l'interface d'autres disciplines. L'institut fait appel à de nombreux talents dans plus d'une quarantaine de métiers différents. 900 personnels d'appui à la recherche et à l'innovation contribuent à faire émerger et grandir des projets scientifiques ou entrepreneuriaux qui impactent le monde. Inria travaille avec de nombreuses entreprises et a accompagné la création de plus de 200 start-up. L'institut s'efforce ainsi de répondre aux enjeux de la transformation numérique de la science, de la société et de l'économie.

Attention: Les candidatures doivent être déposées en ligne sur le site Inria. Le traitement des candidatures adressées par d'autres canaux n'est pas garanti.

Consignes pour postuler

Sécurité défense :

Ce poste est susceptible d'être affecté dans une zone à régime restrictif (ZRR), telle que définie dans le décret n°2011-1425 relatif à la protection du potentiel scientifique et technique de la nation (PPST). L'autorisation d'accès à une zone est délivrée par le chef d'établissement, après avis ministériel favorable, tel que défini dans l'arrêté du 03 juillet 2012, relatif à la PPST. Un avis ministériel défavorable pour un poste affecté dans une ZRR aurait pour conséquence l'annulation du recrutement.

Politique de recrutement :

Dans le cadre de sa politique diversité, tous les postes Inria sont accessibles aux personnes en situation de handicap.
