Offre n°2025-09138

Research engineer - Statistical analysis of longitudinal medical data

Type de contrat : Fixed-term contract

Contrat renouvelable : Oui

Niveau de diplôme exigé : PhD or equivalent

Fonction : Temporary scientific engineer

Contexte et atouts du poste

You will work in the context of the project REWIND (pRecision mEdecine WIth longitudinal Data), a multicentric project (Paris, Bordeaux, Lyon, Grenoble, Nice) granted via the “Investissement d’avenir” PEPR Santé Numérique. The project will focus on the development of new mathematical and statistical approaches for the analysis of multimodal multiscale longitudinal data. These models will be designed, implemented as prototypes, and then transferred to an easily used and well-documented platform where researchers from diverse communities, particularly physicians, will be able to analyze their datasets. The project will allow the development of a new generation of decision support systems, which will help clinicians at the bedside to make more informed decisions for the patient. They will contribute to the development of precision medicine in several key areas.

In this context, you will work in two teams: HeKA (Inria-Inserm-Université Paris Cité) and ARAMIS lab (Inria, CNRS, Inserm and Sorbonne Université). HeKA is located at the PariSanté Campus (https://parisantecampus.fr), while the ARAMIS lab is located at the Paris Brain Institute (https://institutducerveau-icm.org). While HeKA aims at developing methods, models, and tools to create, evaluate, and validate learning health systems, ARAMIS lab is dedicated to the development of new computational approaches for the analysis of large neuroimaging and clinical datasets.

You will be strongly involved in the scientific aspects of the work, such as discussion of methodological issues and interpretation of results. You will interact locally with the PhD students, postdoctoral fellows, and engineers. You will take part in the communications and publications resulting from the use of the software.

Mission confiée

The ARAMIS lab develops the open-source software Leaspy [1,2,3] (https://leaspy.readthedocs.io/en/stable/, https://github.com/aramis-lab/leaspy), a Python library for the statistical analysis of longitudinal data, particularly medical data that comes in the form of repeated observations of patients at different time points. Leaspy allows users to easily fit various models to large-scale clinical studies consisting of clinical scores, cognitive assessments, physiological measurements, or imaging-derived data. Leaspy aims at recombining these series to reconstruct the long-term spatio-temporal trajectory of disease evolution. Each patient can then be positioned relative to the group-average timeline, in terms of both the temporal and spatial differences. Future observations, as well as virtual patient trajectories, can then be simulated. Leaspy is distributed freely to the scientific community and has users worldwide. It has been used to produce high-impact medical publications that have advanced the understanding of neurodegenerative diseases such as Alzheimer's disease, fronto-temporal dementia, and amyotrophic lateral sclerosis [4,5,6,7].

5. Ortholand, P.F. Pradat, S. Tezenas du Montcel, S. Durrleman : 'Interaction of sex and onset site on the disease trajectory of amyotrophic lateral sclerosis', **Journal of Neurology**, 270(12), 5903-5912, 2023
6. Di Folco, R. Couronné, I. Arnulf, G. Mangone, S. Leu-Semenescu, P. Dodet, …, S. Durrleman : 'Charting disease trajectories from isolated REM sleep behavior disorder to Parkinson's disease', **Movement Disorders**, 39(1), 64-75, 2024
7. Moulaire, P.E. Poulet, E. Klockgether, …, S. Durrleman : 'Temporal dynamics of the scale for the assessment and rating of ataxia in spinocerebellar ataxias', **Movement Disorders**, 38(1), 35-44, 2023

Principales activités

You will be in charge of the development of new features (implementation of new models, algorithms, metrics, visualizations), software maintenance, user support, and animation of the community.

In addition, you will be presenting the software at international scientific conferences and other events (organized, for instance, by Inria, ICM, CNRS…). Finally, you will contribute to ambitious medical studies by using Leaspy on large databases of patients, contributing to the interpretation of results, and providing

assistance to users (internal to the lab and external collaborators).

Compétences

PhD degree or master + experience in the field of statistical analysis

Strong programming skills in Python

Experience working with Git/GitHub on open-source projects would be a plus

Excellent relational and communication skills to interact with users and lab members

Good writing skills (documentation, website, scientific articles)

Avantages

- Subsidized meals
- Partial reimbursement of public transport costs
- Leave: 7 weeks of annual leave + 10 extra days off due to RTT (statutory reduction in working hours) + possibility of exceptional leave (sick children, moving home, etc.)
- Possibility of teleworking and flexible organization of working hours
- Professional equipment available (videoconferencing, loan of computer equipment, etc.)
- Social, cultural and sports events and activities
- Access to vocational training
- Social security coverage

Informations générales

- **Thème/Domaine :** Computational Neuroscience and Medicine
  Software engineering (BAP E)
- **Ville :** Paris
- **Centre Inria :** Centre Inria de Paris
- **Date de prise de fonction souhaitée :** 2025-11-01
- **Durée de contrat :** 12 months
- **Date limite pour postuler :** 2025-08-09

Contacts

- **Équipe Inria :** HEKA

A propos d'Inria

Inria est l’institut national de recherche dédié aux sciences et technologies du numérique. Il emploie 2600 personnes. Ses 215 équipes-projets agiles, en général

communes avec des partenaires académiques, impliquent plus de 3900 scientifiques pour relever les défis du numérique, souvent à l'interface d'autres disciplines. L'institut fait appel à de nombreux talents dans plus d'une quarantaine de métiers différents. 900 personnels d'appui à la recherche et à l'innovation contribuent à faire émerger et grandir des projets scientifiques ou entrepreneuriaux qui impactent le monde. Inria travaille avec de nombreuses entreprises et a accompagné la création de plus de 200 start-up. L'institut s'e?orce ainsi de répondre aux enjeux de la transformation numérique de la science, de la société et de l'économie.

Attention: Les candidatures doivent être déposées en ligne sur le site Inria. Le traitement des candidatures adressées par d'autres canaux n'est pas garanti.

Consignes pour postuler

Sécurité défense :
Ce poste est susceptible d'être affecté dans une zone à régime restrictif (ZRR), telle que définie dans le décret n°2011-1425 relatif à la protection du potentiel scientifique et technique de la nation (PPST). L'autorisation d'accès à une zone est délivrée par le chef d'établissement, après avis ministériel favorable, tel que défini dans l'arrêté du 03 juillet 2012, relatif à la PPST. Un avis ministériel défavorable pour un poste affecté dans une ZRR aurait pour conséquence l'annulation du recrutement.

Politique de recrutement :
Dans le cadre de sa politique diversité, tous les postes Inria sont accessibles aux personnes en situation de handicap.
