2018-00235 - [NEO] PhD Position / Networks and Telecommunications

Contract type: Public service fixed-term contract
Level of qualifications required: Graduate degree or equivalent
Function: PhD Position
Level of experience: Recently graduated

About the research centre or Inria department
The Inria Sophia Antipolis - Méditerranée center counts 37 research teams and 9 support departments. The center's staff (about 600 people including 400 Inria employees) is composed of scientists of different nationalities (250 foreigners of 50 nationalities), engineers, technicians and administrators. 1/3 of the staff are civil servants, the others are contractual. The majority of the research teams at the center are located in Sophia Antipolis and Nice in the Alpes-Maritimes. Six teams are based in Montpellier and a team is hosted by the computer science department of the University of Bologna in Italy. The Center is a member of the University and Institution Community (ComUE) "Université Côte d'Azur (UCA)".

Context
PhD Opening at Inria Sophia Antipolis, France

https://www.inria.fr/

at Team NEO

https://team.inria.fr/neo/presentation/

under the supervision of Prof. K. Avrachenkov

e-mail: K.Avrachenkov@inria.fr

http://www-sop.inria.fr/members/Konstantin.Avratchenkov/me.html

This PhD position is within framework of the joint laboratory Inria - Nokia Bell Labs.

Assignment
Topic: Statistical Physics Methods for Distributed Machine Learning

Detailed description: Over the last few years, research in computer science has shifted focus to machine learning methods for the analysis of increasingly large amounts of user data. As the research community has sought to optimize the methods for sparse data and high-dimensional data, more recently new problems have emerged, particularly from a networking perspective that had remained in the periphery. These new directions go beyond sparsity of data and concern the distributed nature of data sources as well as the computation itself.

We feel that statistical physics methods such as Gibbs sampling [3] and Generalized Potts Model [2,4] are particularly well suited to design light complexity, distributed machine learning methods for the tasks of unsupervised and semi-supervised
learning [1].

The student is expected to work on both theoretical and practical aspects of the topic. We intend to employ both mean-field methods [5] and replica method [6] for the analysis of the statistical physics based machine learning algorithms.

Oxford University Press.

Main activities

Preparation of PhD Thesis by writing journal and conference articles, developing algorithms with possible patent application.

Skills

Required skills: solid knowledge of mathematics;
advanced knowledge of probability and statistics is a plus;
knowledge of python is another plus.

Benefits package

- Subsidised catering service
- Partially-reimbursed public transport
- Social security
- Paid leave
- Flexible working hours
- Sports facilities

Remuneration

Duration: 36 months
Location: Sophia Antipolis, France
Gross Salary per month: 1982€ brut per month (year 1 & 2) and 2085€ brut/month (year 3)

General Information

- Theme/Domain: Networks and Telecommunications
  Statistics (Big data) (BAP E)
• Town/city: Sophia Antipolis
• Inria Center: CRI Sophia Antipolis - Méditerranée
• Starting date: 2018-05-02
• Duration of contract: 3 years
• Deadline to apply: 2018-06-30

Contacts
• Inria Team: NEO
• Recruiter: Avrachenkov Konstantin / konstantin.avratchenkov@inria.fr

About Inria

Inria, the French National Institute for computer science and applied mathematics, promotes “scientific excellence for technology transfer and society”. Graduates from the world’s top universities, Inria’s 2,700 employees rise to the challenges of digital sciences. With its open, agile model, Inria is able to explore original approaches with its partners in industry and academia and provide an efficient response to the multidisciplinary and application challenges of the digital transformation. Inria is the source of many innovations that add value and create jobs.

Conditions for application

Application file: Applications must be submitted online on the Inria website. Collecting applications by other channels is not guaranteed.

Defence Security:
This position is likely to be situated in a restricted area (ZRR), as defined in Decree No. 2011-1425 relating to the protection of national scientific and technical potential (PPST). Authorisation to enter an area is granted by the director of the unit, following a favourable Ministerial decision, as defined in the decree of 3 July 2012 relating to the PPST. An unfavourable Ministerial decision in respect of a position situated in a ZRR would result in the cancellation of the appointment.

Recruitment Policy:
As part of its diversity policy, all Inria positions are accessible to people with disabilities.

Warning: you must enter your e-mail address in order to save your application to Inria. Applications must be submitted online on the Inria website. Processing of applications sent from other channels is not guaranteed.
