2018-00283 - R&D Engineer WILLOW

Contract type: Public service-fixed-term contract
Renewable contract: Oui
Level of qualifications required: Graduate degree or equivalent
Fonction: Temporary scientific engineer
Level of experience: Recently graduated

About Inria

Inria, the French National Institute for computer science and applied mathematics, promotes "scientific excellence for technology transfer and society". Graduates from the world's top universities, Inria's 2,700 employees rise to the challenges of digital sciences. With its open, agile model, Inria is able to explore original approaches with its partners in industry and academia and provide an efficient response to the multidisciplinary and application challenges of the digital transformation. Inria is the source of many innovations that add value and create jobs.

Context

Established in 1967, Inria is the only public research body fully dedicated to computational science. Combining computer sciences with mathematics, Inria's 3,500 researchers strive to invent the digital technologies of the future. Educated at leading international universities, they creatively integrate basic research with applied research and dedicate themselves to solving real problems, collaborating with the main players in public and private research in France and abroad and transferring results innovative companies. Inria researchers have published over 4,500 articles in 2013 and are behind over 270 active patents and 110 start-up companies. In 2013, Inria's budget was 235 million euros, 23% of which represented its own resources. The 180 project teams are distributed in eight research centers located throughout France.

The brand new Inria-Paris research center is located in the heart of Paris. Thanks to its top-quality researchers and numerous international guests, the Inria-Paris research center plays a leading role in international research, with a strong focus on networking and communication systems. The 41 research teams of the center are continuously pushing the boundaries in developing new concepts and techniques.

The successful candidate will be hosted within the research team Willow (http://www.di.ens.fr/willow/). Willow is a leading research team in computer vision, focusing on the representational aspects of visual object recognition and dynamic scene understanding. The research objective of the team is to develop geometric, physical, and statistical models for all components of the image interpretation process, including illumination, materials, objects, scenes, and human activities.

Assignment

The goal of the project is to construct new models and learning techniques to develop and learn new powerful representations for image and video understanding. Such representation should support and advance the tasks of visual object and action recognition. Specifically, the project will focus on recognizing objects and action in the object manipulation setup. Initially the manipulation will be performed and learned in the physical simulations settings and pre-recorded real videos of object manipulation by people. Later, depending on the availability of hardware, the representations should be transferred to real robot setup. The project will build on and will advance existing techniques of reinforcement learning, imitation learning and convolutional neural networks. The project may involve collaboration with PhD students and interns at the WILLOW team and should lead to a scientific publication.

Main activities

Construct models and learn representations for understanding visual data

Skills

The candidate should possess good mathematical background and programming skills

Benefits package

- Subsidised catering service
- Partially-reimbursed public transport

General Information

- Theme/Domain : Vision, perception and multimedia interpretation
- Software engineering (BAP E)
- Town/city : Paris
- Inria Center : CRI de Paris
- Starting date : 3/1/18
- Duration of contract : 12 months
- Deadline to apply : 2/16/18

Contacts

- Inria Team : WILLOW
- Recruiter : Boumizy Sabrine / sabrine.boumizy@inria.fr

The keys to success

The candidate should have previous research experience in computer vision and machine learning. The candidate should have a Master degree or higher in engineering and should be fluent in spoken and written English

Conditions for application

Defence Security :
This position is likely to be situated in a restricted area (ZRR), as defined in Decree No. 2011-1425 relating to the protection of national scientific and technical potential (PPST). Authorization to enter an area is granted by the director of the unit, following a favourable Ministerial decision, as defined in the decree of 3 July 2012 relating to the PPST. An unfavourable Ministerial decision in respect of a position situated in a ZRR would result in the cancellation of the appointment.

Recruitment Policy :
As part of its diversity policy, all Inria positions are accessible to people with disabilities.

Warning : you must enter your e-mail address in order to save your application to Inria. Applications must be submitted online on the Inria website. Processing of applications sent from other channels is not guaranteed.
Remuneration

- Duration: 12 months
- Targeted hiring date: 01/03/2018
- Location: Paris 12ème
- Gross Salary per month: according to experience
