Collaborative Data-centric Workflows: Integrating Uncertain Data and Knowledge Base (M/F)

Contract type: Public service fixed-term contract
Level of qualifications required: Graduate degree or equivalent
Fonction: PhD Position

About the research centre or Inria department

The Inria Lille - Nord Europe Research Centre was founded in 2008 and employs a staff of 360, including 300 scientists working in sixteen research teams. Recognised for its outstanding contribution the socio-economic development of the Nord - Pas-de-Calais Region, the Inria Lille - Nord Europe Research Centre undertakes research in the field of computer science in collaboration with a range of academic, institutional and industrial partners.

The strategy of the Centre is to develop an internationally renowned centre of excellence with a significant impact on the City of Lille and its surrounding area. It works to achieve this by pursuing a range of ambitious research projects in such fields of computer science as the intelligence of data and adaptive software systems. Building on the synergies between research and industry, Inria is a major contributor to skills and technology transfer in the field of computer science.

Context

The goal of this PhD is to study the workflows involving crowds for discovering information in the context of uncertain data.

This PhD will be in collaboration with Serge Abiteboul in Valda Team in Paris.

The student will also present his work in conference.

In both cases, travel expenses will be covered

Assignment

Assignments:

Under the supervision of Lionel Seinturier and Pierre Bourhis, the candidate will do a PhD in 3 years.

For a better knowledge of the proposed research subject:
A state of the art, bibliography and scientific references are available at the following URL,
http://cristal.univ-lille.fr/~bourhis/these-headwork.pdf

Collaboration:
The recruited person will be in connection with Serge Abiteboul of the INRIA Team Valda and in the ANR projet Headwork.

Main activities

Main activities:
The candidate will establish a state of the art;
Find questions to lead his project;
Develop Theory and Algorithms;
Experiments the algorithms;
Write reports and present his works in conferences.

Skills

Skills:
The candidate should have good notions in database theory but also in database management programming and in algorithmic. Classical notions of theoretical computer science as complexity
should be known by the candidate. Basic notions over artificial intelligence will be appreciated.

**Required qualities:**

- Sense of organization, autonomy, rigor
- Write notes/reports
- Good knowledge of English

**Benefits package**

**Benefits**

- Subsidised catering service
- Partially-reimbursed public transport
- Social security
- Paid leave
- Flexible working hours
- Sports facilities
