2018-00668 - Development of a Simulator for Performance Evaluation of Low Power Wide Area Networks in IoT

Contract type: Public service fixed-term contract
Level of qualifications required: Graduate degree or equivalent
Fonction: Temporary scientific engineer

About the research centre or Inria department
Located at the heart of the main national research and higher education cluster, member of the Université Paris Saclay, a major actor in the French Investments for the Future Programme (Idex, LabEx, IRT, Equipex) and partner of the main establishments present on the plateau, the centre is particularly active in three major areas: data and knowledge; safety, security and reliability; modelling, simulation and optimisation (with priority given to energy).

The 450 researchers and engineers from Inria and its partners who work in the research centre's 31 teams, the 100 research support staff members, the high-level equipment at their disposal (image walls, high-performance computing clusters, sensor networks), and the privileged relationships with prestigious industrial partners, all make Inria Saclay Île-de-France a key research centre in the local landscape and one that is oriented towards Europe and the world.

Context
This offer is within the framework of a partnership, funded by a DigiCosme grant, supporting jointly the LRI Laboratory of the University of Paris Saclay and INRIA Saclay.

The teams INFINE-POST (Saclay) and ROCS (LRI, UPS) have research activities in Internet of Things (IoT). In this area, recently, Low-Power Wide Area Networks (LPWAN) have recently gained considerable attention. The key objective of these wireless technologies is to connect low-power devices over very large areas, with low data rates. LPWANs are promising for various emerging IoT applications, complementing the traditional cellular and short-range technologies.

Assignment
Assignments:
With the help of Cedric Adjih (Inria) and Steven Martin (ROCS), the recruited person will be taken to develop a simulator for LPWAN that will be the basis on research in that area. The simulator will be implemented in MATLAB, and will include some of the most relevant parts of the LoRaWAN specifications and 3GPP NB-IoT standard. It will include the following software modules: radio propagation model, interference model, channel access method, and scheduling. Using object oriented programming in MATLAB, the simulator will enable to simulate a network deployment with multiple antennas or cells and multiple IoT devices. The objective is to study the performance of LPWAN networks (including different scheduling strategies, improvements and variations at the MAC level.) and to release a final version of the simulator in open source.

For a better knowledge of the proposed research subject:

Main activities
The main activities are as follow:

- Develop the simulator in MATLAB, also integrating various pre-existing modules
- Write documentation
- Manage the simulator as an open-source project

Skills
Technical skills and level required: Good proficiency in programming
Languages: French, English

Benefits package

- Subsidised catering service
- Partially-reimbursed public transport
- Social security
- Paid leave
- Flexible working hours
- Sports facilities

Remuneration
In regards to diplomas and experiences.

General Information

- **Theme/Domain**: Networks and Telecommunications
- **System & Networks (BAP E)**
- **Town/city**: PALAISEAU
- **Inria Center**: CRI Saclay - Île-de-France
- **Starting date**: 2018-09-01
- **Duration of contract**: 12 months
- **Deadline to apply**: 2018-05-31

---

Contacts

- **Inria Team**: INFINE-POST
- **Recruiter**: Adjih Cedric / cedric.adjih@inria.fr

The keys to success

**Education required**: Engineering or Master Degree in Computer communications, Networking, Electronics, or Telecommunications.

**Required skills**: Mobile communications, Simulation of wireless networks, Programming (experience with MATLAB is a plus).

About Inria

Inria, the French National Institute for computer science and applied mathematics, promotes "scientific excellence for technology transfer and society". Graduates from the world's top universities, Inria's 2,700 employees rise to the challenges of digital sciences. With its open, agile model, Inria is able to explore original approaches with its partners in industry and academia and provide an efficient response to the multidisciplinary and application challenges of the digital transformation. Inria is the source of many innovations that add value and create jobs.

Conditions for application

**Defence Security**: This position is likely to be situated in a restricted area (ZRR), as defined in Decree No. 2011-1425 relating to the protection of national scientific and technical potential (PPST). Authorisation to enter an area is granted by the director of the unit, following a favourable Ministerial decision, as defined in the decree of 3 July 2012 relating to the PPST. An unfavourable Ministerial decision in respect of a position situated in a ZRR would result in the cancellation of the appointment.

**Recruitment Policy**: As part of its diversity policy, all Inria positions are accessible to people with disabilities.

**Warning**: you must enter your e-mail address in order to save your application to Inria. Applications must be submitted online on the Inria website. Processing of applications sent from other channels is not guaranteed.
