2018-00880 - Researcher position on "stochastic processes and modeling of large networks" ERC Advanced NEMO project

Contract type : Public service fixed-term contract
Renewable contract : Oui
Level of qualifications required : Graduate degree or equivalent
Fonction : Temporary scientific engineer

Context

Inria promotes "scientific excellence in the service of technology transfer and society". Inria employs 2,700 people from the world’s leading universities to tackle the challenges of computer science and mathematics. Open model allows him to explore original paths with his industrial and academic partners. Inria is at the origin of many innovations creating value and jobs. The position will be attached to the INRIA center in Paris (https://www.inria.fr/en/centre/paris) and more specifically to the DYOGENE research team.

NEMO, NETWORK MOtion, is an inter-disciplinary ERC project centered on network dynamics. The inter-disciplinarity spans from communication engineering to mathematics, with an innovative interplay between the two. NEMO’s focus is on stochastic geometry. NEMO’s aim is to introduce dynamics in wireless stochastic geometry. The aim is to have, through these dynamical versions, the same academic and industrial impact as wireless networks as static stochastic geometry has today. NEMO will leverage structural interactions of INRIA with Ecole Normale Supérieure on the mathematical side, and with Nokia Bell Labs and Orange on the engineering side. This will create in Europe a group focused on this mathematicscommunication engineering interface, and to become the top innovation group of the field worldwide.

Webside for additional job details

Assignment

The ERC NEMO project is hiring a junior researcher with a strong background in probability theory and interests in network science. He/she will be hired for five years to work on all scientific challenges and research tracks of the project. He/she will also help develop relations with our network of external collaborators.

The researcher’s main mission will be to conduct original research activities within the framework of the ERC Nemo project, on the following topics: stochastic processes, random graphs, stochastic geometry, point processes, modeling of large networks. He/she will also have a global co-supervision mission of the ERC research group.

Main activities

To contribute:
- research work on the topics listed above 80%
- supervising PhD students and postdocs working on these topics 10%
- to the animation of scientific life 5%
- reporting process to the ERC 5%

Skills

Mathematics: PhD or equivalent
Engineering: PhD or equivalent
ENGLISH: Excellent
PhDs in one of the fields listed above leading to original results on stochastic processes and/or modeling of large networks.

The profiles can be of various kinds: for example basic training in probability theory with interests on large random graphs, basic training in statistical physics with interests on particle systems, basic training in the field of communication networks with solid foundations in mathematics, etc.

The position should be seen as an exceptional opportunity to do top-level research for 5 years (3 years with possibility of renewal for 2 additional years) on the themes of the ERC Nemo.

Benefits package

- Subsidised catering service
- Partially-reimbursed public transport

Remuneration

- Duration: 3 years with possibility of renewal for 2 additional years
- Targeted hiring date: 01/01/2019
- Location: Paris
- Gross Salary per month: according to experience

Contacts

- Inria Team: DYOGENE

About Inria

Inria, the French national research institute for the digital sciences, promotes scientific excellence and technology transfer to maximise its impact. It employs 2,400 people. Its 200 agile project teams, generally with academic partners, involve more than 3,000 scientists in meeting the challenges of computer science and mathematics, often at the interface of other disciplines. Inria works with many companies and has assisted in the creation of over 160 startups. It strives to meet the challenges of the digital transformation of science, society and the economy.

Conditions for application

Defence Security:

This position is likely to be situated in a restricted area (ZRR), as defined in Decree No. 2011-1425 relating to the protection of national scientific and technical potential (PPST). Authorization to enter an area is granted by the director of the unit, following a favourable Ministerial decision, as defined in the decree of 3 July 2012 relating to the PPST. An unfavourable Ministerial decision in respect of a position situated in a ZRR would result in the cancellation of the appointment.

Recruitment Policy:

As part of its diversity policy, all Inria positions are accessible to people with disabilities.

Warning: you must enter your e-mail address in order to save your application to Inria. Applications must be submitted online on the Inria website. Processing of applications sent from other channels is not guaranteed.
