2018-00337 - Postdoc position in Cloud computing M/F

Type de contrat : CDD de la fonction publique
Contrat renouvelable : Oui
Niveau de diplôme exigé : Thèse ou équivalent
Fonction : Post-Doctorant
Niveau d’expérience souhaité : Jusqu’à 3 ans

A propos du centre ou de la direction fonctionnelle

The Inria Lille - Nord Europe Research Centre was founded in 2008 and employs a staff of 360, including 300 scientists working in sixteen research teams. Recognised for its outstanding contribution the socio-economic development of the Nord - Pas-de-Calais Region, the Inria Lille - Nord Europe Research Centre undertakes research in the field of computer science in collaboration with a range of academic, institutional and industrial partners.

Contexte et atouts du poste

The Spirals project-team is conducting research activities in the domains of distributed systems and software engineering.

Spirals aims at introducing more automation in the adaptation mechanisms of software systems, in particular, transitioning from adaptive systems to self-adaptive systems. Spirals targets especially two properties: self-healing and self-optimization. With self-healing, Spirals aims at studying and tailoring data mining and machine learning solutions for the design and implementation of software systems. This contributes to the goal of obtaining solutions for automatic software repair. With self-optimization, Spirals aims at sharing, collecting, and analyzing distributed behaviors and data to continuously tailor, optimize, and keep under working conditions software systems. This participates to the goal of obtaining eternal distributed systems.

Spirals is a joint project-team between Inria and the University of Lille within UMR 9189 CRIStAL. Spirals originates from the ADAM project-team (2008–13).

Mission confiée

This position consists in conducting research in the area of software engineering and (distributed) systems in collaboration with the members of the Inria Spirals project-team.

In particular, this position focuses on the design and implementation of novel middleware solutions to drastically improve the power efficiency of modern data centers. In the context of an ongoing collaboration with a Cloud provider, Scalar.

The research activities covered by this position will consider various layers of opportunities for reducing the power consumption of the cloud at large, from alternative hardware architectures, to novel software optimisations.

To bootstrap the activities, the initial research contributions will leverage our previous works on cloud computing optimisations [1,2] and energy monitoring [3,4] in production. Depending on the orientation of the results, contributions to open source projects developed by our research group, like PowerAPI (http://powerapi.org) and the rest of the community will be encouraged.

Given the position, the researcher recruited as part of the team will be encouraged to work in collaboration with other members of the team (phd students, engineers, interns) and be involved in the supervision of PhD thesis related to the topic of interest. This also applies to ongoing and future academic and industrial collaboration on the topic of energy efficiency. We are therefore looking for highly

Informations générales

- Thème/Domaine : Systèmes distribués et intergiciels
- Ville : Villeneuve d’Ascq
- Centre Inria : CRI Lille - Nord Europe
- Date de prise de fonction souhaitée : 01/04/2018
- Durée de contrat : 2 ans
- Date limite pour postuler : 31/03/2018

Contacts

- Equipe Inria : SPIRALS
- Recruteur : Rouvoy Romain / romain.rouvoy@inria.fr

Conditions pour postuler

Sécurité défense :
Ce poste est susceptible d’être affecté dans une zone à régime restrictif (ZRR), telle que définie dans le décret n°2011-1425 relatif à la protection du potentiel scientifique et technique de la nation (PPST). L’autorisation d’accès à une zone est délivrée par le chef d’établissement, après avis ministériel favorable, tel que défini dans l’arrêté du 03 juillet 2012, relatif à la PPST. Un avis ministériel défavorable pour un poste affecté dans une ZRR aurait pour conséquence l’annulation du recrutement.

Politique de recrutement :
Dans le cadre de sa politique diversité, tous les postes Inria sont accessibles aux personnes en situation de handicap.
motivated applicants to fulfill this position.

**Principales activités**

Main activities:

- Study the state-of-the-art solution published in this domain
- Propose and design novel solutions to reduce the energy footprint of datacenters
- Prototype and evaluate the designed solution
- Publish the obtained results in high quality venues (conferences and journals).
- Disseminate the software results if applicable

**Compétences**

Technical skills and level required:

- Knowledge of system, network and storage challenges related to the cloud
- Knowledge of software engineering principles (and practices)
- Curiosity, autonomy and social capabilities

Languages:

- English
- French

**Avantages sociaux**

- Subsidised catering service
- Partially-reimbursed public transport

**Rémunération**

Around 31 000 € bruto yearly
