2018-00465 - Post-doctorant (e) : Algebra, Rewriting, and Functional Programming

Type de contrat : CDD de la fonction publique
Niveau de diplôme exigé : Thèse ou équivalent
Fonction : Post-Doctorant
Corps d’accueil : Chargé de Recherche (CR)

A propos du centre ou de la direction fonctionnelle

Located at the heart of the main national research and higher education cluster, member of the Université Paris Saclay, a major actor in the French Investments for the Future Programme (IDEX, LabEx, IRT, Equipex) and partner of the main establishments present on the plateau, the centre is particularly active in three major areas: data and knowledge; safety, security and reliability; modelling, simulation and optimisation (with priority given to energy).

The 450 researchers and engineers from Inria and its partners who work in the research centre’s 31 teams, the 100 research support staff members, the high-level equipment at their disposal (image walls, high-performance computing clusters, sensor networks), and the privileged relationships with prestigious industrial partners, all make Inria Saclay Île-de-France a key research centre in the local landscape and one that is oriented towards Europe and the world.

Contexte et atouts du poste

Functional programming and rewriting theory are intimately related. Namely, the computational model behind functional programming languages is the lambda-calculus, which is the setting where most of the techniques of rewriting theory have been developed before being generalized and made more abstract in order to cover other situations encountered in computer science.

Rewriting theory has also been applied to some branches of mathematics, where it has found many applications to algebra (for instance, the celebrated Knuth-Bendix algorithm was first developed in order to study the theory of groups). While investigating these, deep connections with category theory were found and given rise to higher-dimensional rewriting theory, which is able to deal with higher-dimensional algebraic structures, allowing for the study of fine invariants of those, and show coherence theorems. However, this field is relatively young and many connexions between algebra, rewriting and computational models remain to be studied. In particular, linear rewriting, i.e. rewriting on formal sums of terms, is still not well understood in this context, and would have applications to probabilistic and quantum programming languages, as well as in logical foundations of programming such as linear logic.

Mission confiée

The first aim of the post-doc is, broadly speaking, to explore and develop topics where algebra, rewriting, and programming meet. We propose two concrete axes of work, but other are possible.

The second aim of the post-doc is to foster interactions between teams of Inria and LIX. The post-doc will indeed work in collaboration with Beniamino Accattoli, from the Parsifal Inria team, and Samuel Mimram, from the Cosynus LIX team. Roughly speaking, Accattoli covers the functional programming part, Mimram the algebraic one, and both have their background in rewriting theory.

Principales activités

We propose two directions of work, one based on tools from linear algebra and one on tools from category theory. Of course, the interaction between algebra, functional programming and rewriting goes well beyond these two topics, and candidates interested in other connections are also welcome.

Informations générales

- Thème/Domaine : Preuves et vérification
- Ville : PALAISEAU
- Centre Inria : CRI Saclay - Île-de-France
- Date de prise de fonction souhaitée : 01-11-2018
- Durée de contrat : 1 an, 4 mois
- Date limite pour postuler : 30-04-2018

Contacts

- Equipe Inria : PARSIFAL
- Recruteur : Accattoli Beniamino / beniamino.accattoli@inria.fr

Conditions pour postuler

Les pièces à fournir dans le dossier sont les suivantes :

* un curriculum vitae,
* la liste des publications accompagnée des deux publications jugées les plus représentatives,
* une lettre de motivation,
* une ou plusieurs lettres de recommandation,
* une perspective d’insertion professionnelle après le post-doctorat.

Contact : beniamino.accattoli@inria.fr

Sécurité défense :

Ce poste est susceptible d’être affecté dans une zone à régime restrictif (ZRR), telle que définie dans le décret n°2011-1425 relatif à la protection du potentiel scientifique et technique de la nation (PPST). L’autorisation d’accès à une zone est délivrée par le chef d’établissement, après avis ministériel favorable, tel que défini dans l’arrêté du 03 juillet 2012, relatif à la PPST. Un avis ministériel défavorable pour un poste affecté dans une ZRR aurait pour conséquence l’annulation du recrutement.

Politique de recrutement :

Dans le cadre de sa politique diversité, tous les postes Inria sont accessibles aux personnes en situation de handicap.

Contact : beniamino.accattoli@inria.fr
The first line of work is the rewriting study of the algebraic lambda-calculus, which is an extension of lambda-calculus with linear combinations of programs, and it is at the foundations of probabilistic and quantum functional programming languages. This framework, introduced by Vaux in 2009, has already attracted considerable research, because of its rewriting subtleties, but many questions are still open.

The second line of work is the study of languages allowing the use of monads, e.g. Haskell. We expect that coherence theorems for a lambda-calculus with monads can be achieved through rewriting techniques, from which one can expect to automate the insertion of coercions, made from monad morphisms. This would lead to a practical improvement of state-of-the-art languages (the compiler would automatically insert code, thus simplifying the work of the programmer) which would be theoretically be shown to be sound (the coherence theorem would ensure that no arbitrary decision is taken by the compiler).

Compétences

The successful candidate will have a background in linear algebra or category theory. Knowledge of basic rewriting theory is also expected, while expertise in functional programming is less essential.

Avantages sociaux

- Restauration subventionnée
- Transports publics remboursés partiellement
- Sécurité sociale
- Congés payés
- Aménagement du temps de travail
- Installations sportives

Rémunération

Salaire mensuel brut: 2653 euros
