The work will be conducted at INRIA Lille in the Magnet group, in tight collaboration with several industrial and societal partners. The objectives are:

- First PhD research component, (2) formal ways to describe processes and the information they transfer, and (3) techniques from areas of cryptography. Therefore, this part of the project will involve methods to assess privacy. While differential privacy is a popular paradigm, both classic differential privacy and adaptive software systems. Building on the synergies between research and industry, Inria is a major contributor to skills and technology transfer in the field of computer science.

**Mission confiée**

The research topic has several components. First, we will investigate more generally applicable methods to assess privacy. While differential privacy is a popular paradigm, both classic differential privacy and adaptive software systems. Building on the synergies between research and industry, Inria is a major contributor to skills and technology transfer in the field of computer science.

**Contexte et atouts du poste**

Inria Lille is seeking collaborators (engineers, PhD student and/or postdoctoral researcher) for a new collaborative project on privacy-preserving (semi-)decentralized learning in an IoT setting. The successful candidate will be part of the Magnet team, which gathers 15 researchers (faculty, postdocs, PhD students) in the field of machine learning, with focus on learning from graph-structured data as well as decentralized and privacy-friendly algorithms. The team is very international and English is the working language.

Driven by awareness raised by the recently introduced GDPR and by privacy concerns of their customers, many companies have expressed an interest in more human-friendly and in particular privacy-friendly technology, but have also expressed concerns about the difficulty of applying existing theory in their industrial environment. The proposed project aims at bridging this gap to a large extent. It will feature both research and contributions to open source software in a broader collaborative context.

**Consignes pour postuler**

CV + application letter + recomendation letter + last school transcripts

**Sécurité défense**

Ce poste est susceptible d'être affecté dans une zone à régime restrictif (ZRR), telle que définie dans le décret n°2017-1425 relatif à la protection du potentiel scientifique et technique de la nation (PPST). L'autorisation d'accès à une zone est délivrée par le chef d'établissement, après avis ministériel favorable, tel que défini dans l'arrêté du 03 juillet 2012, relatif à la PPST Un avis ministériel défavorable pour un poste affecté dans une ZRR aurait pour conséquence l'annulation du recrutement.

**Politique de recrutement**

Dans le cadre de sa politique diversité, tous les postes Inria sont accessibles aux personnes en situation de handicap.

**Informations générales**

- **Thème/Domaine :** Optimisation, apprentissage et méthodes statistiques
- **Statistiques (Big data) (BAP E)**
- **Ville :** Villeneuve d’Ascq
- **Centre Inria :** CR Lille - Nord Europe
- **Date de prise de fonction souhaitée :** 2019-03-01
- **Durée de contrat :** 3 ans
- **Date limite pour postuler :** 2019-05-04

**Contacts**

- **Equipe Inria :** MAGNET
- **Directeur de thèse :** Ramon Jan / jan.ramon@inria.fr

**À propos d'Inria**

Inria, l'institut national de recherche dédié aux sciences du numérique, promeut l'excellence scientifique et le transfert pour avoir le plus grand impact. Il emploie 2400 personnes. Ses 200 équipes-projets agiles, en général communes avec des partenaires académiques, impliquent plus de 3000 scientifiques pour relever les défis des sciences informatiques et mathématiques, souvent à l'interface d'autres disciplines. Inria travaille avec de nombreuses entreprises et a accompagné la création de plus de 160 start-up. L'institut s'efforce ainsi de répondre aux enjeux de la transformation numérique de la science, de la société et de l'économie.

**L'essentiel pour réussir**

A successful candidate will

- Collaborate in the team and where applicable with external researchers and engineers
- Organize work efficiently and make a good balance between the several priorities
- Report regularly

**Contextes workshops**

- PhD students) in the field of machine learning, with focus on learning from graph-structured data and adaptive software systems. Building on the synergies between research and industry, Inria is a major contributor to skills and technology transfer in the field of computer science.

**Principales activités**

A possible approach to the project is the following:

1. Privacy measures (8 months)
   - Develop privacy measures for repeated querying
   - Develop models of information flow to assess the consequences of knowledge distributed over many parties, especially for what concerns privacy

2. Process modeling (8 months)
   - Develop a language for modeling distributed processes able to express information flow and privacy aspects
   - Integrate in this language metrics and notions compatible with legal and human-interpretable concepts, allowing for verification and transparency
   - Develop algorithms to perform verification of privacy claims for a process and for explaining a process and its privacy properties to non-expert humans

**Niveau d'expérience souhaité :**

- Jeune diplômé

**Niveau de diplôme exigé :**

**Type de contrat :** CDD de la fonction publique

**CDD de la fonction publique**

**Attention**

Les candidatures doivent être déposées en ligne sur le site Inria. Le traitement des candidatures adressées par d'autres canaux n'est pas garanti.
3. Integrated framework (6 months)
   - Develop a generic framework to integrate the results of the previous two WP (privacy measures and process models) with existing privacy-preserving technology.
   - Adapt existing privacy-preserving algorithms to fit the framework
   - Develop missing building blocks needed for applications
4. Validation (10 months)
   - Interface the developed techniques with applications on which other team members work
   - Evaluate the performance (e.g., functionality, efficiency) on these application domains.
5. Publication (articles, thesis) and exploitation (4 months)

Compétences
A good candidate will have the following skills:
   - A good command of English
   - A strong background in mathematics
   - A good knowledge of machine learning, statistics and algorithms
   - Preferably some knowledge on distributed systems and cryptography
   - Some experience with implementation and experimentation

Please follow the instructions given in https://team.inria.fr/magnet/how-to-apply/ to set up your application file.

Avantages
   - Partially-reimbursed public transport
   - Sports facilities
   - Social security

Rémunération
Gross monthly salary 1982€ for the 1st and 2nd year.
2085€ gross monthly salary for the 3rd year.
