Mission confiée

The above challenging context raises key research questions:

- How to deal with heterogeneity and dynamism, which create runtime uncertainty, when developing and running mobile systems in the open and constantly evolving Internet and IoT environment?
- How to enable automated diagnosis and optimization of networks and systems in the Internet and IoT environment for improving the QoE of their users?
- How to raise human centric crowd-sensing to a reliable means of sensing world phenomena?
- How to deal with combination, analysis and privacy aspects of Web/social media and IoT crowd-sensing data streams?

Principales activités

In response to the research questions identified above, the postdoc researcher is expected to contribute to MiMove's research in one of the following topics:

- **Emergent mobile distributed systems**: We study techniques enabling emergence of mobile distributed systems in a beforehand unknown, ever-changing environment, while assuring that their required properties are met. These are systems that, due to their automated, dynamic, environment-dependent composition and execution, emerge in a possibly non-anticipated way and manifest emergent properties, i.e., both systems and their properties take their complete form only at runtime and may evolve afterwards.

- **Large-scale mobile sensing and actuation**: MiMove investigates algorithms and protocols for efficient coordination of future mobile sensing and actuation systems, with a special focus on the quality of sensing. We deal with challenges arising from the extremely large scale, dynamism and resource constraints of mobile devices, a great number of which will be attached to people, manifesting uncontrolled mobility behavior.

- **Mobile social crowd-sensing**: MiMove investigates the capabilities and challenges resulting from social sensing, which, by directly involving the users, enables sensing phenomena beyond the typical physical sensing (e.g., subjective crowdedness causing discomfort or joyfulness, as in a bus or in a concert) and can lead to a feeling of being more socially involved for the citizens. We study solutions to the combination of physically and socially sensed data, incentives for user participation and assurance of user data privacy, as well as novel mobile apps enabling empirical studies of the complex social behaviors involved.

- **Active and passive probing methods**: We are developing methods that actively introduce probes in the network to discover properties of the connected devices and network segments. We are focusing in particular on adaptive methods to discover properties of home networks and to distinguish if performance bottlenecks lie within the home network versus outside. We are also developing passive methods that simply observe network traffic to infer the performance of networked applications and the location of performance bottlenecks, as well as to extract patterns of web content consumption.

- **Inferring user online experience**: We are developing hybrid measurement methods that combine passive network measurement techniques to infer application performance with techniques from HCI to measure user perception. We will later use the resulting datasets to build models of user perception of network performance based only on data that we can obtain automatically from the user device or from user's traffic observed in the network.

Informations générales

- **Thème/Domaine**: Systèmes distribués et interconnexiels
- **Ville**: Paris
- **Centre Inria**: CRI de Paris
- **Date de prise de fonction souhaitée**: 2019-11-01
- **Durée de contrat**: 1 an, 4 mois
- **Date limite pour postuler**: 2019-03-17

Contacts

- **Equipe Inria**: MIMOVE
- **Recruteur**: Georgantas Nikolaos / nikolaos.georgantas@inria.fr

A propos d'Inria

Inria, l'institut national de recherche dédié aux sciences du numérique, promeut l'excellence scientifique et le transfert pour avoir le plus grand impact. Il emploie 2400 personnes. Ses 200 équipes-projets agiles, en général communes avec des partenaires académiques, impliquent plus de 3000 scientifiques pour relever les défis des sciences informatiques et mathématiques, souvent à l'interface d'autres disciplines. Inria travaille avec de nombreuses entreprises et a accompagné la création de plus de 160 start-up. L'institut s'efforce ainsi de répondre aux enjeux de la transformation numérique de la science, de la société et de l’économie.

Consignes pour postuler

Candidate's file:
- Letter of motivation highlighting the adequacy of the candidate's training with the proposed subject.
- CV
- List of publications.
- Thesis reports if the thesis has already been defended.
- For candidates who have not yet defended, an attestation from the thesis director with a progress report on the thesis / composition of the jury and the probable date of defense.
- Letters of recommendation

Sécurité défense:

Ce poste est susceptible d’être affecté dans une zone à régime restrictif (ZRR), telle que définie dans le décret n°2011-1425 relatif à la protection du potentiel scientifique et technique de la nation (PPST). L'autorisation d'accès à une zone est délivrée par le chef d'établissement, après avis ministériel favorable, tel que défini dans l'arrêté du 03 juillet 2012, relatif à la PPST. Un avis ministériel défavorable pour un poste affecté dans une ZRR aurait pour conséquence l'annulation du recrutement.

Politique de recrutement:

Dans le cadre de sa politique diversité, tous les postes Inria sont accessibles aux personnes en situation de handicap.

Attention: Les candidatures doivent être déposées en ligne sur le site Inria. Le traitement des candidatures adressées par d'autres canaux n'est pas garanti.
Real time data analytics. Advanced analysis of real time data streams from sensors embedded in the environment and wearable or mobile user devices is becoming a key area of data mining research. However, the high data speed in conjunction with the low data quality of IoT data streams challenge traditional Machine-Learning (ML) approaches. We study the effect of the previous on ML algorithms and how to automate data pre-processing tasks (for controlling data quality).

Compétences
The candidate should have a PhD in Computer Science with expertise – including experience in the implementation of related software prototypes – in one and possibly several of the following topics:

- Mobile distributed systems,
- Middleware architectures and protocols,
- Networks and network protocols,
- Network measurements,
- Software engineering,
- Wireless sensor networks,
- Data mining and analysis,
- Social networks.

Avantages
- Subsidized meals
- Partial reimbursement of public transport costs
- Leave: 7 weeks of annual leave + 10 extra days off due to RTT (statutory reduction in working hours) + possibility of exceptional leave (sick children, moving home, etc.)
- Possibility of teleworking (after 6 months of employment) and flexible organization of working hours
- Professional equipment available (videoconferencing, loan of computer equipment, etc.)
- Social, cultural and sports events and activities
- Access to vocational training

Rémunération
- Location: Paris 12ème
- Gross Salary per month: 2 653€ brut/mensuel

Security and defense procedure:
This position is likely to be situated in a restricted area (ZRR), as defined in Decree No. 2011-1425 relating to the protection of national scientific and technical potential (PPST).

Authorisation to enter an area is granted by the director of the unit, following a favourable Ministerial decision, as defined in the decree of 3 July 2012 relating to the PPST. An unfavourable Ministerial decision in respect of a position situated in a ZRR would result in the cancellation of the appointment.
