2021-04188 - Research engineer in geometric data processing for the Geomstats open source library

Type de contrat : CDI
Contrat renouvelable : Oui
Niveau de diplôme exigé : Bac + 5 ou équivalent
 Fonction : Ingénieur scientifique contractuel
Niveau d'expérience souhaité : Jeune diplômé

A propos du centre ou de la direction fonctionnelle

The Inria Sophia Antipolis - Méditerranée center counts 34 research teams as well as 8 support departments. The center’s staff (about 500 people including 320 Inria employees) is made up of scientists of different nationalities (250 foreigners of 50 nationalities), engineers, technicians and administrative staff. 1/3 of the staff are civil servants, the others are contractual agents. The majority of the center’s research teams are located in Sophia Antipolis and Nice in the Alpes-Maritimes. Four teams are based in Montpellier and two teams are hosted in Bologna in Italy and Athens. The Center is a founding member of Université Côte d’Azur and partner of the i-SITE MUSE supported by the University of Montpellier.

Contexte et atouts du poste

In the context of the ERC Advanced grant G-Statistics, a research engineer position (18 months) is offered to contribute to the development and maintenance of the geomstats Python package.

There is an increasing interest in leveraging differential geometry in the machine learning community. Indeed, in many applications the data or the model parameters belong to a manifold, i.e. a space that is defined by a set of constraints or invariance properties, and that only locally resembles the usual Euclidean space. It is now common to account for this geometric structure when defining appropriate statistical models or machine learning algorithms. This research programme aims at developing tools to perform statistical inference and machine learning on Riemannian manifolds. The package is designed both for mathematicians and applied scientists for whom most of the mathematical difficulties are hidden under high-level functions, while providing the suitable material to learn Riemannian geometry. With this tool, we ambition to democratize the use of geometric statistics in data science.

The successful candidate will be part of both the G-Stats group and the Epione team at Inria, the French national research institute for digital science and technology that conducts world-class research. She/he will find an exciting working environment in Sophia-Antipolis on the French Riviera, with the ability to collaborate daily with international researchers on technical implementations and practical applications. Through our international collaborations, she/he will have the opportunity to travel, e.g. to our collaborators’ labs in the Silicon Valley.

Mission confiée

The successful candidate will work closely with the researchers of the team and our collaborators in the USA, to pursue the development of the package. She/he will be expected to contribute directly to the codebase by refactoring the sampling and visualization modules to make them work with more geometries, implementing new statistical learning algorithms and implementing new geometries.

Research scientists of the G-Statistics team will bring the mathematical expertise needed for the new geometries and algorithms while the successful candidate will support their personal developments, with the goal to identify what can be generic and help bringing the code to a level that can be included in geomstats. Every code contribution will come with the corresponding documentation and unit-tests and will be reviewed by peers on Github.

She/he will also oversee the deployment of unit-tests to ensure the compatibility of geomstats on GPUs. Furthermore, the successful candidate will be expected to interact with the international community of geomstats contributors and users via Github, by performing code reviews, responding to issues, and addressing bug reports. Finally, a few hackathons may be organized to gather the contributors around a coding challenge.

Principales activités

- Contribute to the development of geomstats
- Support the developments of the G-Statistics team members
- Test the library on GPUs
- Respond to issues and address bug reports
- Organize hackathons

Compétences

Educational level is expected to be at the Master / Engineering degree. Applicants should have a strong background in mathematics and experience in scientific programming with Python. Knowledge in computer vision, robotics, and others.

Informations générales

- Thème/Domaine : Optimisation, apprentissage et méthodes statistiques
- Plateformes expérimentales logiciel (BAP E)
- Ville : Sophia Antipolis - Méditerranée
- Centre Inria : CRi Sophia Antipolis - Méditerranée
- Date de prise de fonction souhaitée : 2022-03-01
- Durée de contrat : 1 an, 6 mois
- Date limite pour postuler : 2021-11-30

Contacts

- Équipe Inria : EPIONE
- Recruteur : Penne Xavier / Xavier.Penne@inria.fr

A propos d’Inria

Inria est l’institut national de recherche dédié aux sciences et technologies du numérique. Il emploie 2600 personnes. Ses 200 équipes-projets agiles, en général communes avec des partenaires académiques, impliquent plus de 3500 scientifiques pour relever les défis du numérique, souvent à l’interface d’autres disciplines. L’institut fait appel à de nombreux talents dans plus d’une quarantaine de métiers différents. 900 personnels d’appui à la recherche et à l’innovation contribuent à faire émerger et grandir des projets scientifiques ou entrepreneuriaux qui impactent le monde. Inria travaille avec de nombreuses entreprises et a accompagné la création de plus de 180 start-up. L’institut s’efforce ainsi de répondre aux enjeux de la transformation numérique de la science, de la société et de l’économie.

Consignes pour postuler

Sécurité défense : Ce poste est susceptible d’être affecté dans une zone à régime restrictif (ZRR), telle que définie dans le décret n°2011-1425 relatif à la protection du potentiel scientifique et technique de la nation (PPST). L’autorisation d’accès à une zone est délivrée par le chef d’établissement, après avis ministériel favorable, tel que défini dans l’arrêté du 03 juillet 2012, relatif à la PPST. Un avis ministériel défavorable pour un poste affecté dans une ZRR aurait pour conséquence l’annulation du recrutement.

Politique de recrutement : Dans le cadre de sa politique diversité, tous les postes Inria sont accessibles aux personnes en situation de handicap.
of the standard numerical libraries (Numpy, Scipy, Matplotlib, Scikit-learn) is required. Experience with GPUs and the related libraries (PyTorch, Tensorflow, Jax) is a plus. Applicants should also have good communication skills to interact with the researchers of the team (fluent English speaking and writing is required), be willing to learn some mathematics and be eager to solve complex numerical problems.

Avantages

- Subsidized meals
- Partial reimbursement of public transport costs
- Leave: 7 weeks of annual leave + 10 extra days off due to RTT (statutory reduction in working hours) + possibility of exceptional leave (sick children, moving home, etc.)
- Possibility of teleworking (after 6 months of employment) and flexible organization of working hours
- Professional equipment available (videoconferencing, loan of computer equipment, etc.)
- Social, cultural and sports events and activities
- Access to vocational training
- Social security coverage

Rémunération

From 2632 euros gross monthly (according to degree and experience)
