Offre n°2023-06375

PhD Position F/M Hair Capture and Modeling

Type de contrat : CDD

Niveau de diplôme exigé : Bac + 5 ou équivalent

Fonction : Doctorant

A propos du centre ou de la direction fonctionnelle

The Inria Grenoble research center groups together almost 600 people in 23 research teams and 7 research support departments.

Staff is present on three campuses in Grenoble, in close collaboration with other research and higher education institutions (University Grenoble Alpes, CNRS, CEA, INRAE, …), but also with key economic players in the area.

Inria Grenoble is active in the fields of high-performance computing, verification and embedded systems, modeling of the environment at multiple levels, and data science and artificial intelligence. The center is a top-level scientific institute with an extensive network of international collaborations in Europe and the rest of the world.

Contexte et atouts du poste

About

The Ph.D. position is part of a joint laboratory between Interdigital, a leading technology and research company, and Inria, the French national institute of computer science and automation. The PhD will be one of several PhD topics around the avatar representation of people, within a collaboration framework between Inria and InterDigital called Nemo.ai.

The PhD will start as soon as possible and will last 3 years.

It will be supervised by The Morpheo team at INRIA Grenoble Rhône-Alpes and the MetaVideo group at InterDigital Research and Innovation labs in Rennes. The focus of Morpheo's research is on perceiving and interpreting moving shapes, with applications to character animation, and immersive and interactive environments. The MetaVideo group that will co-supervise the PhD develops representations for the transmission of digital human and avatar character models in interactive environments.

https://team.inria.fr/morpheo/

Location

The PhD student will be hosted by the Morpheo team at INRIA Grenoble Rhône-Alpes, with some stays in the InterDigital R&I labs in Rennes.

Some connections with the other members of the research team (INRIA Grenoble, INRIA Rennes, InterDigital Rennes) will also be planned, such as visits, seminars and talks.

More information

For more information on this position, contact jean-sebastien.franco@inria.fr or Francois.LeClerc@interDigital.com.

Mission confiée

Capturing and modeling the dynamics of human hair is a difficult problem, still little explored by the research community. The complex structure of thin intertwined strands makes recovering hair models
from images or videos a particularly challenging task.

Pioneering works consider multi-view stereo reconstructions of point clouds which are further fitted to learned examples of hair strands, as in [1]. Still building on multi-view stereo, [2] proposes to modify the approach and to reconstruct line curves instead of points. Recent works in the field investigate deep learning strategies. For instance [3] directly infers a parametric strand representation from a single view using an auto encoder architecture. In [4] a Variational Auto-Encoder (VAE) is trained to learn latent volumetric representations of hairs which combine occupancy and orientation information. The VAE is further conditioned on image input and can generate a hair representation from a single image. [5] proposes a Generative Adversarial Network (GAN) to generate 3D volumetric and orientation fields given 2D hair orientations and bust depths as extracted from a 2D image. The 3D orientation volumes can then guide hair synthesis.

All the above approaches recover only static hair representations from image information. In [6] the dynamic aspect is tackled with a strategy that builds on [5] to produce 3D orientation volumes in addition to motion encoded as 3D warping volumes.

The PhD objective is to recover dynamic hair models given image sequences. A first task is related to the representation to be considered for that purpose. Recent works in the field build on 3D orientation volumes as mentioned before. A potentially interesting direction in that respect is provided by [7] which considers dynamic garments and represent them with a coarse 2D template over which dynamic information is encoded as a texture. A similar strategy could be explored in 3D to represent hair.

The second task will consist in recovering hair models from input images and proposing a data driven approach for that purpose. A dataset of 3D hair models and corresponding image renderings will be provided. Augmenting this dataset and finding suitable representations of hair for processing will be another task of the PhD.

**Principales activités**

See assignements.

**Compétences**

**Candidate profile**

- Master in Computer Science or Applied Mathematics.
- Solid programming skills, e.g. python and/or C++.
- Solid mathematical knowledge in geometry, linear algebra and statistics.
- Experience with computer vision, deep learning and shape modeling is a plus.
- Experience with physics-based simulation is a plus.
- Good English level. French is not required.

**Avantages**

- Subsidized meals
- Partial reimbursement of public transport costs
- Leave: 7 weeks of annual leave + 10 extra days off due to RTT (statutory reduction in working hours) + possibility of exceptional leave (sick children, moving home, etc.)
- Possibility of teleworking (90 days / year) and flexible organization of working hours
- Professional equipment available (videoconferencing, loan of computer equipment, etc.)
- Social, cultural and sports events and activities
- Access to vocational training
- Social security coverage under conditions

**Rémunération**

1st and 2nd year: 2 051 euros gross salary / month
3rd year: 2 158 euros gross salary / month

**Informations générales**
**Thème/Domaine :** Vision, perception et interprétation multimedia
**Statistiques (Big data) (BAP E)**

**Ville :** Montbonnot

**Centre Inria :** Centre Inria de l'Université Grenoble Alpes

**Date de prise de fonction souhaitée :** 2023-10-01

**Durée de contrat :** 3 ans

**Date limite pour postuler :** 2023-10-31

---

### A propos d'Inria

Inria est l'institut national de recherche dédié aux sciences et technologies du numérique. Il emploie 2600 personnes. Ses 215 équipes-projets agiles, en général communes avec des partenaires académiques, impliquent plus de 3900 scientifiques pour relever les défis du numérique, souvent à l'interface d'autres disciplines. L'institut fait appel à de nombreux talents dans plus d'une quarantaine de métiers différents. 900 personnels d'appui à la recherche et à l'innovation contribuent à faire émerger et grandir des projets scientifiques ou entrepreneuriaux qui impactent le monde. Inria travaille avec de nombreuses entreprises et a accompagné la création de plus de 200 start-up. L'institut s'efforce ainsi de répondre aux enjeux de la transformation numérique de la science, de la société et de l'économie.

### L'essentiel pour réussir

Only complete applications will be considered. Please send:

- CV
- motivation letter
- your grades (Bachelor and Master studies)
- the name and contact information of 2 people willing to provide a reference for you (Master's supervisor or Prof. for instance)

---

**Attention :** Les candidatures doivent être déposées en ligne sur le site Inria. Le traitement des candidatures adressées par d'autres canaux n'est pas garanti.

### Consignes pour postuler

Applications must be submitted online on the Inria website.

Processing of applications sent by other channels is not guaranteed.

**Sécurité défense :**

Ce poste est susceptible d'être affecté dans une zone à régime restrictif (ZRR), telle que définie dans le décret n°2011-1425 relatif à la protection du potentiel scientifique et technique de la nation (PPST). L'autorisation d'accès à une zone est délivrée par le chef d'établissement, après avis ministériel favorable, tel que défini dans l'arrêté du 03 juillet 2012, relatif à la PPST. Un avis ministériel défavorable pour un poste affecté dans une ZRR aurait pour conséquence l'annulation du recrutement.

**Politique de recrutement :**

Dans le cadre de sa politique diversité, tous les postes Inria sont accessibles aux personnes en situation de handicap.
