Offre n°2023-06600

Handling partitioned data description for HPC applications and runtimes

Le descriptif de l’offre ci-dessous est en Anglais

Type de contrat : CDD
Niveau de diplôme exigé : Thèse ou équivalent
Fonction : Chercheur contractuel

A propos du centre ou de la direction fonctionnelle

The Inria research centre in Lyon is the 9th Inria research centre, formally created in January 2022. It brings together approximately 300 people in 16 research teams and research support services. Its staff are distributed at this stage on 2 campuses: in Villeurbanne La Doua (Centre / INSA Lyon / UCBL) on the one hand, and Lyon Gerland (ENS de Lyon) on the other.

The Lyon centre is active in the fields of software, distributed and high-performance computing, embedded systems, quantum computing and privacy in the digital world, but also in digital health and computational biology.

Contexte et atouts du poste

Numerical simulation is a key technology for many application domains. Thanks to the democratization of high performance computers (HPC), complex physics and more generally complex systems can now be simulated routinely. Numerical simulation is considered as the third pillar of sciences (with experiment and theory) and is critical to gain competitive position.

One critical aspect to achieve high performance is the management of the partitioned data that is closely related to the parallelization itself as well as to hierarchy memory optimizations in particular with respect to memory layout and accesses. Unfortunately, different configurations are needed to efficiently exploit different hardware. Hence, a portability layer is usually used to abstract the actual management of partitioned data from their usage. Therefore, it enables the implementation of optimization strategies behind this layer.

The situation is getting more complex as the partitioned data is accessed from multiple points of view. First of all, application developer needs to access it to actually use it, ideally from an application abstract view. Second, as an efficient memory layout may differ for example between the CPU and GPU space, task oriented runtime systems such as StarPU [1] need to have access to the implementation detail of the partitioned data to be able to efficiently handle data transfer and task scheduling. Third, programming models that aim at simplifying the development of HPC and increasing portability such as COMET [2] also need a specific access to the internal of partitioned data to be able to generate tasks and their dependencies.

This work is part of the Exa-Soft projet of NumPEx, a PEPR on the Exascale. Exa-Soft aims at consolidating the exascale software ecosystem by providing a coherent, exascale-ready software stack featuring breakthrough research advances enabled by multidisciplinary collaborations between researchers. This position is part of the efficient and composable programming model workpackage but include joint work with the runtime system workpackage.

Mission confiée

The recruited person will participate to the definition of a model that support the multiple views that need to access to a partitionned data. The model shall address scientific challenges related to productivity, performance portability, and heterogeneity support.

First, the recruit person will conduct a state-of-the-art analysis in particular with respect to data partitionning, programming models (such as COMET [1]) and runtimes (such as StarPU) as well as to selected applications. Second, she will propose a model that support data views from application developers, StarPU, and Comet needs. Third, she will implement and evaluate a proof-of-concept to validate the feasibility of the approach. The PoC will be applied to a use case to be selected during the analysis phase. A candidate application is Aevol that exhibit good properties for this study because of its use of complex data structures.

The recruited person will work in an stimulating environement in the AVALON team located in the LIP at
ENS de Lyon. She will be in connection with the STORM team that develops StarPU as well as many partner of NumPEx to define the actual needs from the various perspectives. In particular, she will collaborate with the BEAGLE team that brings the Aevol use case [3].

Principales activités

- Study the state-of-the-art of partitioned data management
- Propose a model combining various views on partitioned data
- Implement a PoC that support StarPU and COMET
- Conduct an evaluation of the proof of concept on selected use cases

Compétences

Technical skills and level required:

- very good knowledge of HPC programming models and runtimes (e.g. OpenMP)
- good programming skills (Python and C++)
- knowledge in (meta-)modeling will be appreciated

Avantages

- Subsidized meals
- Partial reimbursement of public transport costs
- Leave: 7 weeks of annual leave + 10 extra days off due to RTT (statutory reduction in working hours)
  + possibility of exceptional leave (sick children, moving home, etc.)
- Possibility of teleworking and flexible organization of working hours
- Professional equipment available (videoconferencing, loan of computer equipment, etc.)
- Social, cultural and sports events and activities
- Access to vocational training
- Social security coverage

Informations générales

- Thème/Domaine : Calcul distribué et à haute performance
- Calcul Scientifique (BAP E)
- Ville : Lyon
- Centre Inria : Centre Inria de Lyon
- Date de prise de fonction souhaitée : 2023-12-01
- Durée de contrat : 1 an
- Date limite pour postuler : 2023-10-31

Contacts

- Équipe Inria : AVALON
- Recruteur : Perez Christian / christian.perez@inria.fr

A propos d'Inria

Inria est l'institut national de recherche dédié aux sciences et technologies du numérique. Il emploie 2600 personnes. Ses 215 équipes-projets agiles, en général communes avec des partenaires académiques, impliquent plus de 3900 scientifiques pour relever les défis du numérique, souvent à l'interface d'autres disciplines. L'institut fait appel à de nombreux talents dans plus d'une quarantaine de métiers différents. 900 personnels d'appui à la recherche et à l'innovation contribuent à faire émerger et grandir des projets scientifiques ou entrepreneuriaux qui impactent le monde. Inria travaille avec de nombreuses entreprises et à accompagné la création de plus de 200 start-up. L'institut s'efforce ainsi de répondre aux enjeux de la transformation numérique de la science, de la société et de l'économie.

Attention : Les candidatures doivent être déposées en ligne sur le site Inria. Le traitement des candidatures adressées par d'autres canaux n'est pas garanti.

Consignes pour postuler
Sécurité défense :
Ce poste est susceptible d’être affecté dans une zone à régime restrictif (ZRR), telle que définie dans le décret n°2011-1425 relatif à la protection du potentiel scientifique et technique de la nation (PPST). L’autorisation d’accès à une zone est délivrée par le chef d’établissement, après avis ministériel favorable, tel que défini dans l’arrêté du 03 juillet 2012, relatif à la PPST. Un avis ministériel défavorable pour un poste affecté dans une ZRR aurait pour conséquence l’annulation du recrutement.

Politique de recrutement :
Dans le cadre de sa politique diversité, tous les postes Inria sont accessibles aux personnes en situation de handicap.
