Post-Doctoral Research Visit F/M

Methods and models for the clinical evaluation of Digital Medical Devices

Le descriptif de l’offre ci-dessous est en Anglais

Type de contrat : CDD
Contrat renouvelable : Oui
Niveau de diplôme exigé : Thèse ou équivalent
Autre diplôme apprécié : MD Phd or PhD
Fonction : Post-Doctorant
Niveau d'expérience souhaité : Jeune diplômé

Contexte et atouts du poste

HEKA and SISTM are collaborating in the context of the new national initiatives to support the digital transformation of medical practices.

In this context, the objectives of the HEKA-SISTM collaboration are to propose efficacy and safety/risk assessment via clinical evaluations of AI based DMDs aiming at diagnostics, therapeutics, monitoring patient’s disease, managing patient’s care organization and improving prevention and healthcare.

More generally, In terms of methodological development and breakthroughs, this collaboration will specifically propose major advance in several innovative pathways under novel computational models approaches:

1. Propose new methodological paradigms for the clinical evaluation of DMD and AI based algorithms in the context of perpetual clinical trials and perpetual agile or interim risk assessment,
2. Use, model, and tailor auxiliary multidimensional and multi-source of data (preclinical and clinical) to better design and analyze clinical trials of all phases.
3. Explore the appropriateness and the relevance to use these heterogeneous data sources, create new trial data sources based on modelling and simulations such as in silico trials, synthetic controls, etc. to reduce trial sample size and accelerate development.

This is in this context, at the interface between clinical epidemiology, applied mathematics and biostatistics, that HEKA and SISTM are offering a 2-year postdoctoral position.

Teams involved:

- HeKA (https://team.inria.fr/heka/) is a common project-team of Inria, Inserm and Université Paris Cité. HeKA is affiliated with the “Centre de Recherche des Cordeliers” and Inria Paris. HeKA is a multidisciplinary team composed of researchers, clinicians-researchers, teacher-researchers from Inria, Inserm, University Paris Cité and AP–HP, associated with departments of the European Hospital Georges Pompidou, Necker Hospital and the Imagine Institute.

HEKA Research themes are biomedical informatics, biostatistics and applied mathematics for clinical decision support. The objective of HeKA is to develop methodologies, tools and their applications in clinics towards a learning health system, i.e., a health system that leverages clinical data collected to extract agilely and reliably novel medical knowledge that, in turn, continuously improves healthcare. HEKA relies on the availability of EHRs (Electronic Health Records), clinical trials, cohorts and other linked data to develop models for stratification and prediction with the potential of improving the precision and the personalization of treatments, and in turn the quality of healthcare.

- SISTM (https://www.inria.fr/en/sistm) is a common project team of Inria, Insem and Université de Bordeaux. SISTM is affiliated with the Bordeaux Population Health institute and Inria de l’Université de Bordeaux. SISTM is composed of researchers and clinicians-researchers from Inria, Inserm, Université de Bordeaux and the CHU de Bordeaux. SISTM is also the main component of the data science department of the Vaccine Research Institute which with the Bordeaux Hospital Clinical Trial Unit provides most of SISTM research applications. SISTM addresses the challenge of
analyzing big data to answer clinical and biological questions by using appropriate statistical methods. With data such as those reflecting the machinery of a cell or such as the clinical status of individuals for instance in clinical trials, new tools are needed to translate information obtained from complex systems into knowledge. This has led to the field of « systems biology » and by extension « systems medicine », which naturally takes place in the context of translational medicine that links clinical and biological research.

The methods SISTM develops are mainly based on either mechanistic modeling using differential equation systems or on statistical learning methods. The general paradigm of SISTM approach is to include as much information as available to answer a given question. This information comes from the available data but also from prior biological information available defining the structure of the model or restricting the space of the parameter values.

**Position objectives and better knowledge of the proposed subject:**

In this context, the candidate will inscribe her/his research on the following axes:

- Development of innovative clinical study models DMD
- Writing scientific papers and reports in English
- Be in contact and working in collaboration with National Health institutions and industry
- Helping in managing PhD students and engineers recruited in the project
- Summary and presentation to stakeholders of applications and methodological solutions for the clinical validation of DMD.

The proposed postdoc position will thus be part of this general strategy that will cover the entire spectrum from DMD-specific methods development to communication/dissemination to the decision-making stakeholder.

**Is regular travel foreseen for this position?**

The candidate will travel between Paris and Bordeaux. Travel expenses are covered within the limits of the scale in force.

**Mission confiée**

**Mission:**

The postdoc applicant is expected to work with both the HEKA and the SISTM teams.

To this purpose, the candidate will integrate teams involving methodologists, medical informatics, applied mathematicians and biostatisticians in a very attractive environment with computing facilities and many interactions with high level stakeholders.

**Collaboration:**

The candidate will be under the supervision of both Sarah Zohar (HEKA) and Rodolphe Thiébaut (SISTM).

As the postdoc position is a collaboration between HEKA in Paris and SISTM in Bordeaux, the localization of the candidate will be the result of discussing the project and the expectations of the applicant.

**Responsibilities:**

The candidate is expected that beyond pursuing her/his subject, she/he will participate to the teams scientific discussions and activities and contribute to the support to master, engineers and PhD students.

**Management:**

Depending on her/his experience, the candidate is expected to support of the younger scientists in the team and possibly be a relay to the HEKA and SISTM directions on her/his topic.

**Principales activités**

**Main activities:**

- Conduct the planned research project in collaboration with both HEKA and SISTM teams
- Propose innovative methods for the evaluation of DMDs
- Develop programs/applications/R-Packages for the corresponding methods
Publish the results of the planned research in peer reviewed publications
Prepare reports for the different funding agencies.

Additional activities:
- Support the engagement with the stakeholders by preparing relevant documentation
- Support the test/use of the proposed DMDs evaluation solutions by a community of users
- Support clinical trials methodologists willing to set-up trials using the developed methods

Compétences

Technical skills:
- Coding Python or/and R
- Scientific English writing

Languages:
- English level C or bilingual / French (optional)

Avantages

- Subsidized meals
- Partial reimbursement of public transport costs
- Possibility of teleworking and flexible organization of working hours
- Professional equipment available (videoconferencing, loan of computer equipment, etc.)
- Social, cultural and sports events and activities
- Access to vocational training
- Social security coverage

Rémunération

2788€ / month (before taxes)

Informations générales

- Thème/Domaine : Biologie numérique
  Statistiques (Big data) (BAP E)
- Ville : Bordeaux
- Centre Inria : Centre Inria de l'université de Bordeaux
- Date de prise de fonction souhaitée : 2024-01-01
- Durée de contrat : 2 ans
- Date limite pour postuler : 2023-11-05

Contacts

- Équipe Inria : SISTM
- Recruteur :
  Thiebaut Rodolphe / Rodolphe.Thiebaut@inria.fr

A propos d'Inria

Inria est l'institut national de recherche dédié aux sciences et technologies du numérique. Il emploie 2600 personnes. Ses 215 équipes-projets agiles, en général communes avec des partenaires académiques, impliquent plus de 3900 scientifiques pour relever les défis du numérique, souvent à l'interface d'autres disciplines. L'institut fait appel à de nombreux talents dans plus d'une quarantaine de métiers différents. 900 personnels d'appui à la recherche et à l'innovation contribuent à faire émerger et grandir des projets scientifiques ou entrepreneuriaux qui impactent le monde. Inria travaille avec de nombreuses entreprises et a accompagné la création de plus de 200 start-up. L'institut s'efforce ainsi de répondre aux enjeux de la transformation numérique de la science, de la société et de l'économie.

L'essentiel pour réussir

We are looking for a highly motivated candidate with an outstanding potential. The candidate should hold a PhD and have an expertise in clinical epidemiology, applied mathematics or (bio)statistics or computer sciences.

A medical profile with the above expertise would be a plus, as well as a strong interest or experience in digital tools such as DMDs, Internet of Things and AI.

The successful candidates are expected to conduct innovative research at the highest international level.
Attention: Les candidatures doivent être déposées en ligne sur le site Inria. Le traitement des candidatures adressées par d'autres canaux n'est pas garanti.

Consignes pour postuler

Thank you to send:
- CV
- Cover letter
- Support letters (mandatory)
- List of publication

Sécurité défense :
Ce poste est susceptible d'être affecté dans une zone à régime restrictif (ZRR), telle que définie dans le décret n°2011-1425 relatif à la protection du potentiel scientifique et technique de la nation (PPST). L'autorisation d'accès à une zone est délivrée par le chef d'établissement, après avis ministériel favorable, tel que défini dans l'arrêté du 03 juillet 2012, relatif à la PPST. Un avis ministériel défavorable pour un poste affecté dans une ZRR aurait pour conséquence l'annulation du recrutement.

Politique de recrutement :
Dans le cadre de sa politique diversité, tous les postes Inria sont accessibles aux personnes en situation de handicap.
