

Offre n°2024-07627

Post-Doctoral Research Visit F/M Drone-based adapted agricultural data collection in rural environment.

Le descriptif de l'offre ci-dessous est en Anglais

Type de contrat : CDD

Niveau de diplôme exigé : Thèse ou équivalent

Fonction : Post-Doctorant

Niveau d'expérience souhaité : De 5 à 12 ans

A propos du centre ou de la direction fonctionnelle

The Inria University of Lille centre, created in 2008, employs 360 people including 305 scientists in 15 research teams. Recognised for its strong involvement in the socio-economic development of the Hauts-De-France region, the Inria University of Lille centre pursues a close relationship with large companies and SMEs. By promoting synergies between researchers and industrialists, Inria participates in the transfer of skills and expertise in digital technologies and provides access to the best European and international research for the benefit of innovation and companies, particularly in the region.

For more than 10 years, the Inria University of Lille centre has been located at the heart of Lille's university and scientific ecosystem, as well as at the heart of Frenchtech, with a technology showroom based on Avenue de Bretagne in Lille, on the EuraTechnologies site of economic excellence dedicated to information and communication technologies (ICT).

Contexte et atouts du poste

The OCOD ANR project, coordinated by INRAe and gathering Inria, University of Franche Comté and University of Clermont Ferrand aims to design and deploy a full wireless sensor network based system to sense, collect and assist different crop production in remote and hostile environment. The system will be composed of a smart wireless sensor network to sense and collect efficiently the data. In rural remote regions, even with such a distributed wireless sensor networks, when the network is too sparse, there might have no end-to-end connectivity between the sensors and the central entity that needs to process data. An alternative way to collect data is thus to collect them from the air with the support of UAV (Unmanned Aerial Vehicles).

This project aims to investigate a new generation of data collection, combining intelligent wireless sensors and aerial means, and test this approach in agriculture, in particular in the test farm of INRAe in Auvergne. The main objective is to use unmanned aerial vehicles (commonly called "drone") as data mules to collect data from connected objects on the ground, in natural environments. This aerial solution will facilitate collections in hard-to-access natural environments, which can also suffer from signal attenuation with traditional communication networks. In this context, drones offer a large geographical zone of intervention, and are easier to deploy than land-based mobile vectors (e.g. ground vehicles). Compared to traditional sensor networks, this approach greatly lightens the hardware infrastructure to deploy, by avoiding the installation of numerous gateways to route information from the sensor nodes; gateways are expensive, energy intensive and require regular maintenance, which is incompatible with their presence in an uneasily accessible natural environment.

In some cases, it is not possible for the drone to visit each terrestrial node, either for ground typology, energy efficiency (at the drone or at the ground wireless network level) or because of unexpected events?

The main objective of this project will be to design a dynamic multi hop data routing transmission able to dynamically convey data through the terrestrial sensor nodes towards a specific sink node that will be visited by the drone. This routing must take into consideration hardware and energy constraints by integrating for instance the capacity of the path to reduce data amount and be flexible enough to determine the best appropriate sink node.

Mission confiée

Within the OCOD project, the candidate will be in charge in the design and implementation of the drone-based adapted agricultural data collection for rural environment. He/she will participate to the OCOD project dynamic. He/She will also have to participate to the FUN team life.

Principales activités

The candidate will work jointly with INRAe and other project partners in order to learn about specificities of each crop that could be exploited. Collaborations could be extended with the Sencrop company with which the FUN team collaborate.

All results will be validated experimentally, first on our lab testbed and then in real fields, both teams owning drones and wireless devices.

Timeline:

T0-T3: Review of adequate combined adapted routing and drone-assisted data collection

T4-T10: Investigation of a dynamic collect point selection integrating specificities of agricultural data

T0-T10: Handling of hardware and software already developed in both teams (parallel task)

T10-T15: Integration of dynamic collect point selection in a dynamic path planning approach for drones, implementation and validation

Compétences

We demand the candidate:

- 1) to be curious and interested in new technologies
- 2) to have excellent skills in scripting and programming (e.g., python, C/C++, Java, ROS)
- 3) to have a strong background in mobile networks, Wireless and Mobile Networks.
- 4) to be fluent in spoken and written English with strong communication and presentation skills.
- 5) to be a pleasant team worker (verbal communication, active listening, motivation and commitment)

Avantages

- Subsidized meals
- Partial reimbursement of public transport costs
- Leave: 7 weeks of annual leave + 10 extra days off due to RTT (statutory reduction in working hours) + possibility of exceptional leave (sick children, moving home, etc.)
- Possibility of teleworking and flexible organization of working hours
- Professional equipment available (videoconferencing, loan of computer equipment, etc.)
- Social, cultural and sports events and activities
- Access to vocational training
- Social security coverage

Rémunération

2788 € monthly gross salary

Informations générales

- **Thème/Domaine** : Réseaux et télécommunications
Système & réseaux (BAP E)
- **Ville** : Villeneuve d'Ascq
- **Centre Inria** : [Centre Inria de l'Université de Lille](#)
- **Date de prise de fonction souhaitée** : 2025-11-01
- **Durée de contrat** : 12 mois
- **Date limite pour postuler** : 2025-08-04

A propos d'Inria

Inria est l'institut national de recherche dédié aux sciences et technologies du numérique. Il emploie 2600 personnes. Ses 215 équipes-projets agiles, en général communes avec des partenaires académiques, impliquent plus de 3900 scientifiques pour relever les défis du numérique, souvent à l'interface d'autres disciplines. L'institut fait appel à de nombreux talents dans plus d'une quarantaine de métiers différents. 900 personnels d'appui à la recherche et à l'innovation contribuent à faire émerger et grandir des projets scientifiques ou entrepreneuriaux qui impactent le monde. Inria travaille avec de nombreuses entreprises et a accompagné la création de plus de 200 start-up. L'institut s'efforce ainsi de répondre aux enjeux de la transformation numérique de la science, de la société et de l'économie.

L'essentiel pour réussir

We are looking for a candidate that has a PhD in computer science who is creative in proposing solution solutions and capable of critical analysis of results.

Attention: Les candidatures doivent être déposées en ligne sur le site Inria. Le traitement des candidatures adressées par d'autres canaux n'est pas garanti.

Consignes pour postuler

Please send your CV and cover letter

Sécurité défense :

Ce poste est susceptible d'être affecté dans une zone à régime restrictif (ZRR), telle que définie dans le décret n°2011-1425 relatif à la protection du potentiel scientifique et technique de la nation (PPST). L'autorisation d'accès à une zone est délivrée par le chef d'établissement, après avis ministériel favorable, tel que défini dans l'arrêté du 03 juillet 2012, relatif à la PPST. Un avis ministériel défavorable pour un poste affecté dans une ZRR aurait pour conséquence l'annulation du recrutement.

Politique de recrutement :

Dans le cadre de sa politique diversité, tous les postes Inria sont accessibles aux personnes en situation de handicap.
