

## Offre n°2024-07879

# PhD Position F/M Detection of coordinated influence campaigns online

*Le descriptif de l'offre ci-dessous est en Anglais*

Type de contrat : CDD

Niveau de diplôme exigé : Bac + 5 ou équivalent

Fonction : Doctorant

## A propos du centre ou de la direction fonctionnelle

The Inria Saclay-Île-de-France Research Centre was established in 2008. It has developed as part of the Saclay site in partnership with **Paris-Saclay University** and with the **Institut Polytechnique de Paris**.

The centre has **39 project teams**, 27 of which operate jointly with Paris-Saclay University and the Institut Polytechnique de Paris; Its activities occupy over 600 people, scientists and research and innovation support staff, including 44 different nationalities.

## Contexte et atouts du poste

The thesis is financed by the newly created agency: Agence ministérielle pour l'intelligence artificielle de défense (AMIAD), and it will be in collaboration with Inria and Ecole Polytechnique.

You can find here more information on AMIAD: <https://www.defense.gouv.fr/actualites/bertrand-rondepierre-professionnaliser-lusage-lia-gagner-guerre>

The thesis subject is on detecting coordinated influence campaigns online. A detailed version of the subject can be found here: [https://www.lix.polytechnique.fr/Labo/Oana.GOGA/papers/2024\\_AMIAD.pdf](https://www.lix.polytechnique.fr/Labo/Oana.GOGA/papers/2024_AMIAD.pdf)

## Mission confiée

Social media platforms have changed how users consume news and stay updated on current events, with nearly half of U.S. adults now turning to social media, especially Facebook, as their primary news source [12]. This reliance on Facebook for news brings both advantages and concerns. On the one hand, it enables effortless news dissemination, democratizes access to information, and allows users to exchange ideas and opinions with people. On the other hand, many organizations have raised concerns about the platform facilitating exposure to misinformation [1, 6]. One key enabling mechanism is the ease with which anyone can claim to be a news provider and share news-related content without verification. Recent reports showed the emergence of organizations aiming to influence voters during elections by claiming to be local news providers [2].

The goal of this PhD is to detect online coordinated campaigns aiming to influence citizens by masquerading as news providers.

## Principales activités

Task 1: Automated detection of self-proclaimed news providers: Fostering a healthy news environment requires constant monitoring and auditing of content shared by both known and less-known self-proclaimed news providers. Unfortunately, having a comprehensive view remains impossible, as Facebook does not disclose the list of self-proclaimed news providers on the platform. In an attempt to audit the (mostly U.S.) news media ecosystem, known journalistic agencies, MediaBiasFactCheck and NewsGuard, have aggregated a list of 4k news media Facebook pages [10, 9]. As they are the only sources, many recent news-related studies have only considered established news providers listed by journalists [4, 13, 7, 8, 11]. However, we do not know to which extent these lists are comprehensive and, hence, to which extent relying studies provide an extensive view of the entire Facebook news ecosystem.

In this proposal, we propose an approach that relies on the assumption that Facebook pages claiming to be (and wanting to look like) news sources typically post news-related content. Therefore, our key idea is

to perform a daily crawl that: (1) exploits the GNews API [5] to get a sample of news articles published by established news media in the past 24 hours and extract a set of corresponding keywords; (2) uses CrowdTangle [3], an API provided by Meta, to search for Facebook posts mentioning these keywords in the past 24 hours; and (3) filters only Facebook pages that self-identify as news media. Facebook pages that claim to be news providers usually list on their About page the corresponding news domain. This way, we will be able to have a list of both Facebook pages and domains that claim to be news providers. Our plan is to create the largest dataset Worldwide of self-proclaimed news providers.

**Task 2: Clustering of news providers pertaining to the same entity:** To be able to detect a coordinated influence campaign, we need to be able to group together all news providers that belong to the same entity. Previous works have exploited IP addresses to link together news domains [2]. However, with the emergence of public hosting infrastructure, this method is no longer effective. Our key idea is that news providers are usually displaying ads on their pages. When setting up the ad technology to be able to show ads, a website owner needs to create a file, called ads.txt, that will list its identifier in different ad networks. Our plan is to collect the ads.txt files of all the websites detected in the previous step and use clustering techniques to link together news websites that share the same identifiers across different ad networks.

**Task 3: Identify influence campaigns:** After we link together news sources that belong to the same entity, the next step is to distinguish between legitimate clusters (the same mother organization supports news sources in different regions of the country) and coordinated influence campaign clusters. For this, we will analyze the content of the posted articles using the NLP techniques, and we will measure biases in the way current issues are presented. We will also implement NLP techniques to detect the use of propaganda in the presented articles.

## Compétences

Technical skills and level required :

Strong programming skills.

Expertise in data analysis.

## Avantages

- Subsidized meals
- Partial reimbursement of public transport costs
- Leave: 7 weeks of annual leave + 10 extra days off due to RTT (statutory reduction in working hours) + possibility of exceptional leave (sick children, moving home, etc.)
- Possibility of teleworking (after 6 months of employment) and flexible organization of working hours
- Professional equipment available (videoconferencing, loan of computer equipment, etc.)
- Social, cultural and sports events and activities
- Access to vocational training
- Social security coverage

## Rémunération

Monthly gross salary : 2 082 euros

## Informations générales

- **Thème/Domaine :** Représentation et traitement des données et des connaissances  
Instrumentation et expérimentation (BAP C)
- **Ville :** Palaiseau
- **Centre Inria :** [Centre Inria de Saclay](#)
- **Date de prise de fonction souhaitée :** 2024-10-01
- **Durée de contrat :** 3 ans
- **Date limite pour postuler :** 2024-09-30

## Contacts

- **Équipe Inria:** [CEDAR](#)
- **Directeur de thèse :**  
Goga Oana / [oana.goga@inria.fr](mailto:oana.goga@inria.fr)

## A propos d'Inria

Inria est l'institut national de recherche dédié aux sciences et technologies du numérique. Il emploie 2600 personnes. Ses 215 équipes-projets agiles, en général communes avec des partenaires académiques, impliquent plus de 3900 scientifiques pour relever les défis du numérique, souvent à l'interface d'autres disciplines. L'institut fait appel à de nombreux talents dans plus d'une quarantaine de métiers différents. 900 personnels d'appui à la recherche et à l'innovation contribuent à faire émerger et grandir des projets scientifiques ou entrepreneuriaux qui impactent le monde. Inria travaille avec de nombreuses entreprises et a accompagné la création de plus de 200 start-up. L'institut s'efforce ainsi de répondre aux enjeux de la transformation numérique de la science, de la société et de l'économie.

## L'essentiel pour réussir

Publications in top-tier CS conferences.

Tools and methods to detect coordinated influence campaigns online.

**Attention:** Les candidatures doivent être déposées en ligne sur le site Inria. Le traitement des candidatures adressées par d'autres canaux n'est pas garanti.

## Consignes pour postuler

### Sécurité défense :

Ce poste est susceptible d'être affecté dans une zone à régime restrictif (ZRR), telle que définie dans le décret n°2011-1425 relatif à la protection du potentiel scientifique et technique de la nation (PPST). L'autorisation d'accès à une zone est délivrée par le chef d'établissement, après avis ministériel favorable, tel que défini dans l'arrêté du 03 juillet 2012, relatif à la PPST. Un avis ministériel défavorable pour un poste affecté dans une ZRR aurait pour conséquence l'annulation du recrutement.

### Politique de recrutement :

Dans le cadre de sa politique diversité, tous les postes Inria sont accessibles aux personnes en situation de handicap.
