

Offre n°2025-08783

**Post-Doctoral Research Visit F/M
Postdoctoral position – Systems biology
and metabolic modelling of uncultured
bacteria**

Le descriptif de l'offre ci-dessous est en Anglais

Type de contrat : CDD

Contrat renouvelable : Oui

Niveau de diplôme exigé : Thèse ou équivalent

Fonction : Post-Doctorant

A propos du centre ou de la direction fonctionnelle

The Inria center at the University of Bordeaux is one of the nine Inria centers in France and has about twenty research teams.. The Inria centre is a major and recognized player in the field of digital sciences. It is at the heart of a rich R&D and innovation ecosystem: highly innovative SMEs, large industrial groups, competitiveness clusters, research and higher education players, laboratories of excellence, technological research institute...

Contexte et atouts du poste

The postdoctoral position is offered as part of a **partnership between [INRAE](#)** (the French National Research Institute for Agriculture, Food, and the Environment) **and [Inria](#)** (the French National Institute for Research in Digital Science and Technology). It is **funded by the TARGET project, promoted by [INRAE's EXPLOR'AE](#)** "high-risk research" programme.

The TARGET project is an **interdisciplinary initiative combining microbiology, culturomics, genetic engineering, systems biology, and modelling**. It is a four-year research project. The postdoctoral position offered within this project is for an **initial two-year period, with the possibility of renewal for an additional two years**.

Context of the project:

Since the late 19th century, microbiologists have been developing culture media and techniques to study microorganisms such as bacteria, archaea, yeasts, and filamentous fungi. However, **only a small fraction of bacterial species are currently cultivable**, severely limiting their study. While advances in metagenomics have highlighted this limitation, genome sequencing alone has not provided sufficient explanations for why many bacterial species remain unculturable. This lack of cultivability remains a scientific enigma and a major barrier to applications in fields such as disease control, antibiotic discovery, biomolecule production, microbiome management, and bioremediation. In bacteria that live in association with eukaryotic hosts, understanding metabolic interactions with their partners opens new possibilities for developing tailored culture media, thereby facilitating their study. **Using grapevine Flavescence Dorée phytoplasma as a proof of concept, the TARGET project aims to demonstrate that integrating systems biology, genome engineering, and culturomics can help overcome the challenge of bacterial non-cultivability.**

This postdoctoral position is part of the project's **metabolic modelling work package**, with objectives including the **development of numerical models for the metabolism of minimal bacteria and Flavescence Dorée phytoplasma**. These models will be used to predict suitable culture media. The project involves close collaboration between modellers and microbiologists to bridge computational and experimental approaches.

The recruited researcher will work in collaboration between [Inria Pleiade](#) team in Talence and [INRAE BFP](#) (Fruit biology and Pathology) unit at Villenave d'Ornon. At Inria, the work will be carried under the supervision of [Clémence Frioux](#). Pleiade hosts researchers in mathematics, computer science and computational biology working on developing approaches for microbial community characterisation. Two teams are involved at INRAE: MOLLI (Pascal Sirand Pugno) where most of the experimentations will be carried out, and META specialised in metabolic modelling. The co-supervisor of the position is [Sylvain Prigent](#), researcher in the META team.

Mission confiée

The recruited postdoctoral researcher will be the **main modeller of the systems biology work package**.

The work focuses on **constructing metabolic models of Mollicutes and Flavescence Dorée phytoplasma (FDp) to better understand their metabolic functions and predict suitable growth media**. Initially, the work will apply proven strategies to well-studied Mollicutes, refining models and predicting culture conditions, followed by validation experiments carried out by collaborators. A similar approach will then be used to develop and validate models for *Spiroplasma citri* and FDp. Comparative metabolic network analysis across Mollicutes will help generate functional insights, while further efforts will explore dynamic models of FDp metabolism within its hosts. Ultimately, the project aims to integrate symbiotic interactions into these models to enhance understanding of FDp physiology in insect vectors.

Strong collaborations are planned with the TARGET consortium in order to provide hypotheses for new experimentations and to integrate into models experimental results.

Principales activités

- Reconstruction, curation, and comparison of metabolic networks from genomic data.
- Use and development of various metabolic models: individual-scale models, dynamic models, and community models.
- Writing scientific articles.
- Collaborating with microbiologists to refine models and guide experiments.

Compétences

Technical Skills and Required Level:

- Experience in modelling and systems biology
- Good programming skills, preferably in Python
- Good practices in software development

Languages:

- Proficiency in English is expected for disseminating results through research papers and in conferences

Interpersonal Skills:

- Ability to work collaboratively in an interdisciplinary environment
- Strong analytical and problem-solving skills
- Good communication and teamwork abilities

Additional Desirable Skills:

- Knowledge of metabolic modelling techniques
- Experience in bioinformatics and data analysis
- Familiarity with high-performance computing environments
- Experience in collaborating with experimental biologists

Avantages

- Subsidized meals
- Partial reimbursement of public transport costs
- Leave: 7 weeks of annual leave + 10 extra days off due to RTT (statutory reduction in working hours) + possibility of exceptional leave (sick children, moving home, etc.)
- Possibility of teleworking and flexible organization of working hours
- Professional equipment available (videoconferencing, loan of computer equipment, etc.)
- Social, cultural and sports events and activities
- Access to vocational training
- Social security coverage

Rémunération

The gross monthly salary will be 2788€ (Before social security contributions and monthly withholding tax).

Informations générales

- **Thème/Domaine** : Biologie numérique
Biologie et santé, Sciences de la vie et de la terre (BAP A)
- **Ville** : Talence
- **Centre Inria** : [Centre Inria de l'université de Bordeaux](#)
- **Date de prise de fonction souhaitée** : 2025-09-01
- **Durée de contrat** : 2 ans
- **Date limite pour postuler** : 2025-04-30

Contacts

- **Équipe Inria** : [PLEIADE](#)
- **Recruteur** :
Frioux Clemence / clemence.frioux@inria.fr

A propos d'Inria

Inria est l'institut national de recherche dédié aux sciences et technologies du numérique. Il emploie 2600 personnes. Ses 215 équipes-projets agiles, en général communes avec des partenaires académiques, impliquent plus de 3900 scientifiques pour relever les défis du numérique, souvent à l'interface d'autres disciplines. L'institut fait appel à de nombreux talents dans plus d'une quarantaine de métiers différents. 900 personnels d'appui à la recherche et à l'innovation contribuent à faire émerger et grandir des projets scientifiques ou entrepreneuriaux qui impactent le monde. Inria travaille avec de nombreuses entreprises et a accompagné la création de plus de 200 start-up. L'institut s'efforce ainsi de répondre aux enjeux de la transformation numérique de la science, de la société et de l'économie.

L'essentiel pour réussir

- **Experience in modelling / systems biology** – Prior experience in computational modelling, particularly in the context of biological systems, is highly desirable.
- **Bioinformatics skills** – Proficiency in handling genomic and metabolic data, with experience in relevant bioinformatics tools and pipelines.
- **Metabolic modelling** – Ideally, familiarity with metabolic network reconstruction, constraint-based modelling, and dynamic models.
- **Autonomy and strong analytical and writing skills** – Ability to work independently, synthesise complex information, and contribute to scientific publications.

- **Interest in interdisciplinary research and collaborative work** – Willingness to engage with microbiologists and experimentalists to refine models and guide laboratory experiments.

Attention: Les candidatures doivent être déposées en ligne sur le site Inria. Le traitement des candidatures adressées par d'autres canaux n'est pas garanti.

Consignes pour postuler

If you are interested by thi sjob, please could you apply on website jobs.inria with the following documents :

- cv
- cover letter
- recommendation letters

Sécurité défense :

Ce poste est susceptible d'être affecté dans une zone à régime restrictif (ZRR), telle que définie dans le décret n°2011-1425 relatif à la protection du potentiel scientifique et technique de la nation (PPST). L'autorisation d'accès à une zone est délivrée par le chef d'établissement, après avis ministériel favorable, tel que défini dans l'arrêté du 03 juillet 2012, relatif à la PPST. Un avis ministériel défavorable pour un poste affecté dans une ZRR aurait pour conséquence l'annulation du recrutement.

Politique de recrutement :

Dans le cadre de sa politique diversité, tous les postes Inria sont accessibles aux personnes en situation de handicap.
