

Offre n°2025-08802

PhD Position F/M AI-assisted modeling for the design large-scale nanophotonic devices

Le descriptif de l'offre ci-dessous est en Anglais

Type de contrat : CDD

Niveau de diplôme exigé : Bac + 5 ou équivalent

Autre diplôme apprécié : Master

Fonction : Doctorant

A propos du centre ou de la direction fonctionnelle

The Inria centre at Université Côte d'Azur includes 42 research teams and 9 support services. The centre's staff (about 500 people) is made up of scientists of different nationalities, engineers, technicians and administrative staff. The teams are mainly located on the university campuses of Sophia Antipolis and Nice as well as Montpellier, in close collaboration with research and higher education laboratories and establishments (Université Côte d'Azur, CNRS, INRAE, INSERM ...), but also with the regional economic players.

With a presence in the fields of computational neuroscience and biology, data science and modeling, software engineering and certification, as well as collaborative robotics, the Inria Centre at Université Côte d'Azur is a major player in terms of scientific excellence through its results and collaborations at both European and international levels.

Contexte et atouts du poste

Nanophotonics is the science that studies the interactions between light and matter at the nanoscale. Light is an electromagnetic wave whose wavelength is in the visible spectrum, i.e., between approximately 400 nm to 800 nm. In this context, one refers to as sub-wavelength structuring of matter. The structuring of matter at these scales allows these interactions to be shaped for a variety of technological and societal applications. Numerical modeling is extensively used for understanding the physical phenomena underlying light-matter interactions, but also for tailoring or harnessing these interactions guided by specific performance objectives. The first objective requires to numerically solve the system of time-domain or frequency-domain Maxwell equations coupled to differential equations modeling the behavior of propagation media at optical frequencies while the second goal is addressed by leveraging a numerical optimization algorithm in the framework of an inverse design workflow. For both objectives, the Atlantis team from the Inria Center at Université Côte d'Azur is developing the DIOGENeS [<https://diogenes.inria.fr/>] software suite, which is dedicated to the numerical study of multiscale problems relevant to nanophotonics and nanoplasmonics. DIOGENeS implements several Discontinuous Galerkin (DG) type methods for which the team has developed a long-term expertise [1-3]. It also includes an inverse design component, which relies on statistical learning-based global optimization methods for single-objective, multi-objective and robust optimization [4-6]. Beside the above-mentioned high-fidelity DG-based electromagnetic solvers, since 2022 the team is also actively studying alternative modeling and design approaches leveraging Deep Neural Networks (DNNs) [7].

Mission confiée

This PhD project is proposed in the context of the ANR-FAPESP DNN4Photonics project that started on January 1st, 2025, and which is a collaborative research project between the Atlantis project-team from the Inria Center at Université Côte d'Azur and the LEMAC laboratory at Universidade Estadual de Campinas (Unicamp) in Brazil. This PhD project is concerned with the development of novel DNN-based approaches for the design of complex large-scale nanophotonic devices such as metasurfaces or metalenses. The general objective of the research will be to propose, develop and assess different building block approaches relying on DNNs for designing nanophotonic devices of increased complexity, in particular for what concerns the size of the devices as compared to the characteristic wavelength or wavelength range of the problem under consideration. For this, the following steps will be considered: (1) Detailed review of state-of-the-art approaches in the bibliography on AI-based modeling for nanophotonics, with a focus on inverse design methodologies; (2) Study, formulation and development of novel DNN approaches for the inverse design of nanophotonic devices beyond state-of-the-art methodologies; (3) Applications of the developed DNN inverse design methodologies to concrete application contexts including those of the DNN4Photonics project; (4) Synthesis and publication of results in high rank journals and international conferences.

Compétences

Technical skills and level required :

- Master or engineering degree in numerical mathematics or scientific computing or data sciences
- Sound knowledge and experience with Machine Learning/Deep Learning
- Sound knowledge of numerical analysis for PDEs
- Basic knowledge of physics of electromagnetic wave propagation

Software development skills : Python and PyTorch

Relational skills : team worker (verbal communication, active listening, motivation and commitment)

Other valued appreciated : good level of spoken and written English

Avantages

- Subsidized meals
- Partial reimbursement of public transport costs

- Leave: 7 weeks of annual leave + 10 extra days off due to RTT (statutory reduction in working hours) + possibility of exceptional leave (sick children, moving home, etc.)
- Possibility of teleworking and flexible organization of working hours
- Professional equipment available (videoconferencing, loan of computer equipment, etc.)
- Social, cultural and sports events and activities
- Access to vocational training
- Contribution to mutual insurance (subject to conditions)

Rémunération

Duration: 36 months

Location: Sophia Antipolis, France

Gross Salary per month: 2200€ (2025)

Informations générales

- **Thème/Domaine** : Schémas et simulations numériques
Calcul Scientifique (BAP E)
- **Ville** : Sophia Antipolis
- **Centre Inria** : [Centre Inria d'Université Côte d'Azur](#)
- **Date de prise de fonction souhaitée** : 2025-07-01
- **Durée de contrat** : 3 ans
- **Date limite pour postuler** : 2025-05-31

Contacts

- **Équipe Inria** : [ATLANTIS](#)
- **Directeur de thèse** :
Lanteri Stéphane / Stephane.Lanteri@inria.fr

A propos d'Inria

Inria est l'institut national de recherche dédié aux sciences et technologies du numérique. Il emploie 2600 personnes. Ses 215 équipes-projets agiles, en général communes avec des partenaires académiques, impliquent plus de 3900 scientifiques pour relever les défis du numérique, souvent à l'interface d'autres disciplines. L'institut fait appel à de nombreux talents dans plus d'une quarantaine de métiers différents. 900 personnels d'appui à la recherche et à l'innovation contribuent à faire émerger et grandir des projets scientifiques ou entrepreneuriaux qui impactent le monde. Inria travaille avec de nombreuses entreprises et a accompagné la création de plus de 200 start-up. L'institut s'efforce ainsi de répondre aux enjeux de la

transformation numérique de la science, de la société et de l'économie.

Attention: Les candidatures doivent être déposées en ligne sur le site Inria. Le traitement des candidatures adressées par d'autres canaux n'est pas garanti.

Consignes pour postuler

Sécurité défense :

Ce poste est susceptible d'être affecté dans une zone à régime restrictif (ZRR), telle que définie dans le décret n°2011-1425 relatif à la protection du potentiel scientifique et technique de la nation (PPST). L'autorisation d'accès à une zone est délivrée par le chef d'établissement, après avis ministériel favorable, tel que défini dans l'arrêté du 03 juillet 2012, relatif à la PPST. Un avis ministériel défavorable pour un poste affecté dans une ZRR aurait pour conséquence l'annulation du recrutement.

Politique de recrutement :

Dans le cadre de sa politique diversité, tous les postes Inria sont accessibles aux personnes en situation de handicap.
